EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D003	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
D004	ARSENIC
D005	BARIUM
D006	CADMIUM
D007	CHROMIUM
D008	LEAD
D009	MERCURY
D010	SELENIUM
D011	SILVER
D018	BENZENE
D019	CARBON TETRACHLORIDE
D020	CHLORDANE
D021	CHLOROBENZENE
D022	CHLOROFORM
D023	O-CRESOL
D024	M-CRESOL

EPA Waste Codes Addendum

Code	Description
D025	P-CRESOL
D026	CRESOL
D027	1,4-DICHLOROBENZENE

Code	Description
	VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F004	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: CRESOLS AND CRESYLIC ACID, AND NITROBENZENE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F006	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
F007	SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS
F008	PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.
F009	SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.
F010	QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.
F011	SPENT CYANIDE SOLUTIONS FROM SALT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.
F012	QUENCHING WASTE WATER TREATMENT SLUDGES FROM METAL HEAT TREATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.
F019	WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.
F025	CONDENSED LIGHT ENDS, SPENT FILTERS AND FILTER AIDS, AND SPENT DESICCANT WASTES FROM THE PRODUCTION OF CERTAIN CHLORINATED ALIPHATIC HYDROCARBONS, BY FREE RADICAL CATALYZED PROCESSES. THESE CHLORINATED ALIPHATIC HYDROCARBONS ARE THOSE HAVING CARBON CHAIN LENGTHS RANGING FROM ONE TO AND INCLUDING FIVE, WITH VARYING AMOUNTS AND POSITIONS OF CHLORINE SUBSTITUTION.
F032	WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT

EPA Waste Codes Addendum

Code	Description
	FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT CURRENTLY USE OR HAVE PREVIOUSLY USED CHLOROPHENOLIC FORMULATIONS (EXCEPT POTENTIALLY CROSS-CONTAMINATED WASTES THAT HAVE HAD THE F032 WASTE CODE DELETED IN ACCORDANCE WITH SECTION 261.35 OF THIS CHAPTER AND WHERE THE GENERATOR DOES NOT RESUME OR INITIATE USE OF CHLOROPHENOLIC FORMULATIONS). THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL. (NOTE: THE LISTING OF WASTEWATERS THAT HAVE NOT COME INTO CONTACT WITH PROCESS CONTAMINANTS IS STAYED ADMINISTRATIVELY. THE LISTING FOR PLANTS THAT HAVE PREVIOUSLY USED CHLOROPHENOLIC FORMULATIONS IS ADMINISTRATIVELY STAYED WHENEVER THESE WASTES ARE COVERED BY THE F034 OR F035 LISTINGS. THESE STAYS WILL REMAIN IN EFFECT UNTIL FURTHER ADMINISTRATIVE ACTION IS TAKEN.)
F034	WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESS GENERATED AT PLANTS THAT USE CREOSOTE FORMULATIONS. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL. (NOTE: THE LISTING OF WASTEWATERS THAT HAVE NOT COME INTO CONTACT WITH PROCESS CONTAMINANTS IS STAYED ADMINISTRATIVELY. THE STAY WILL REMAIN IN EFFECT UNTIL FURTHER ADMINISTRATIVE ACTION IS TAKEN.)
F035	WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESS GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL (NOTE: THE LISTING OF WASTEWATERS THAT HAVE NOT COME INTO CONTACT WITH PROCESS CONTAMINANTS IS STAYED ADMINISTRATIVELY. THE STAY WILL REMAIN IN EFFECT UNTIL FURTHER ADMINISTRATIVE ACTION IS TAKEN.).
F037	PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE-ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN: OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORMWATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGE GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED FROM NON-CONTACT ONCE-THROUGH COOLING WATERS SEGREGATED FOR TREATMENT FROM OTHER PROCESS OR OILY COOLING WATERS, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS) AND K051 WASTES ARE NOT INCLUDED IN THIS LISTING.
F038	PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE-ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN: INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED FROM NON-CONTACT ONCE-THROUGH COOLING WATERS SEGREGATED

EPA Waste Codes Addendum

Code	Description
	FOR TREATMENT FROM OTHER PROCESS OR OILY COOLING WATERS, SLUDGES AND FLOATS GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES AND FLOATS GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS) AND F037, K048, AND K051 WASTES ARE NOT INCLUDED IN THIS LISTING.
F039	LEACHATE (LIQUIDS THAT HAVE PERCOLATED THROUGH LAND DISPOSED WASTES) RESULTING FROM THE DISPOSAL OF MORE THAN ONE RESTRICTED WASTE CLASSIFIED AS HAZARDOUS UNDER SUBPART D OF THIS PART. (LEACHATE RESULTING FROM THE DISPOSAL OF ONE OR MORE OF THE FOLLOWING EPA HAZARDOUS WASTES AND NO OTHER HAZARDOUS WASTES RETAINS ITS EPA HAZARDOUS WASTES NUMBER(S): F020, F021, F022, F026, F027, AND/OR F028).
K001	BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATERS FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.
K002	WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF CHROME YELLOW AND ORANGE PIGMENTS.
K003	WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF MOLYBDATE ORANGE PIGMENTS
K004	WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF ZINC YELLOW PIGMENTS
K005	WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF CHROME GREEN PIGMENTS
K006	WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF CHROME OXIDE GREEN PIGMENTS (ANHYDROUS AND HYDRATED).
K031	BY-PRODUCT SALTS GENERATED IN THE PRODUCTION OF MSMA AND CACODYLIC ACID
K045	SPENT CARBON FROM THE TREATMENT OF WASTEWATER CONTAINING EXPLOSIVES
K062	SPENT PICKLE LIQUOR GENERATED BY STEEL FINISHING OPERATIONS OF FACILITIES WITHIN THE IRON AND STEEL INDUSTRY (SIC CODES 331 AND 332).
K071	BRINE PURIFICATION MUDS FROM THE MERCURY CELL PROCESS IN CHLORINE PRODUCTION, WHERE SEPARATELY PREPURIFIED BRINE IS NOT USED.
K084	WASTEWATER TREATMENT SLUDGES GENERATED DURING THE PRODUCTION OF VETERINARY PHARMACEUTICALS FROM ARSENIC OR ORGANO-ARSENIC COMPOUNDS.
K106	WASTEWATER TREATMENT SLUDGE FROM THE MERCURY CELL PROCESS IN CHLORINE PRODUCTION
P003	ACROLEIN
P003	2-PROPENAL
P010	ARSENIC ACID H3ASO4
P024	BENZENAMINE, 4-CHLORO-

EPA Waste Codes Addendum

Code	Description
P024	P-CHLOROANILINE
P028	BENZENE, (CHLOROMETHYL)-
P028	BENZYL CHLORIDE
P066	ETHANIMIDOTHIOIC ACID, N-[[(METHYLAMINO)CARBONYL]OXY]-, METHYL ESTER
P066	METHOMYL
P077	BENZENAMINE, 4-NITRO-
P077	P-NITROANILINE
U006	ACETYL CHLORIDE (C,R,T)
U057	CYCLOHEXANONE (I)
U078	1,1-DICHLOROETHYLENE
U078	ETHENE, 1,1-DICHLORO-
U105	BENZENE, 1-METHYL-2,4-DINITRO-
U105	2,4-DINITROTOLUENE
U122	FORMALDEHYDE
U123	FORMIC ACID (C,T)
U134	HYDROFLUORIC ACID (C,T)
U134	HYDROGEN FLUORIDE (C,T)
U136	ARSINIC ACID, DIMETHYL-
U136	CACODYLIC ACID
U161	METHYL ISOBUTYL KETONE (I)
U161	4-METHYL-2-PENTANONE (I)
U161	PENTANOL, 4-METHYL-
U211	CARBON TETRACHLORIDE
U211	METHANE, TETRACHLORO-
U328	BENZENAMINE, 2-METHYL-
U328	O-TOLUIDINE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC).

Date of Government Version: 06/13/00
Date Made Active at EDR: 07/06/00
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 06/27/00
Elapsed ASTM days: 9
Date of Last EDR Contact: 11/06/00

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/16/00
Date Made Active at EDR: 08/16/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 06/05/00
Elapsed ASTM days: 72
Date of Last EDR Contact: 12/29/00

CERCLIS-NFRAP: No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 04/16/00
Date Made Active at EDR: 08/16/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 06/05/00
Elapsed ASTM days: 72
Date of Last EDR Contact: 12/29/00

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 04/20/00
Date Made Active at EDR: 08/01/00
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 06/12/00
Elapsed ASTM days: 50
Date of Last EDR Contact: 12/11/00

RCRIS: Resource Conservation and Recovery Information System
Source: EPA/NTIS
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 06/21/00
Date Made Active at EDR: 07/31/00
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 07/10/00
Elapsed ASTM days: 21
Date of Last EDR Contact: 11/09/00

ERNS: Emergency Response Notification System
Source: EPA/NTIS
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 08/08/00
Date Made Active at EDR: 09/06/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 08/11/00
Elapsed ASTM days: 26
Date of Last EDR Contact: 10/31/00

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/97
Database Release Frequency: Biennially
Date of Last EDR Contact: 12/19/00
Date of Next Scheduled EDR Contact: 03/19/01

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies
Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: NTIS
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 01/31/99
Database Release Frequency: Annually
Date of Last EDR Contact: 10/12/00
Date of Next Scheduled EDR Contact: 01/08/01

DELISTED NPL: NPL Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/13/00
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 11/06/00
Date of Next Scheduled EDR Contact: 02/05/01

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/07/00
Database Release Frequency: Quarterly
Date of Last EDR Contact: 10/10/00
Date of Next Scheduled EDR Contact: 01/08/01

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4526
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 05/31/00
Database Release Frequency: Annually
Date of Last EDR Contact: 10/24/00
Date of Next Scheduled EDR Contact: 01/22/01

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/23/00
Database Release Frequency: Quarterly
Date of Last EDR Contact: 10/10/00
Date of Next Scheduled EDR Contact: 01/08/01

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 08/01/98
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 01/02/01
Date of Next Scheduled EDR Contact: 04/02/01

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 11/20/00
Date of Next Scheduled EDR Contact: 02/19/01

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-260-3936
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 01/01/00
Database Release Frequency: Annually
Date of Last EDR Contact: 10/24/00
Date of Next Scheduled EDR Contact: 02/12/01

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned
Date of Last EDR Contact: 12/11/00
Date of Next Scheduled EDR Contact: 03/12/01

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/97
Database Release Frequency: Annually
Date of Last EDR Contact: 12/27/00
Date of Next Scheduled EDR Contact: 03/26/01

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-1444
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98
Database Release Frequency: Every 4 Years
Date of Last EDR Contact: 12/12/00
Date of Next Scheduled EDR Contact: 03/12/01

STATE OF NEW JERSEY ASTM STANDARD RECORDS

SHWS: Known Contaminated Sites in New Jersey Except Those Associated with Bureau of Underground Storage Sites (BUST)
Source: New Jersey Department of Environmental Protection
Telephone: 609-292-8761
The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

Date of Government Version: 09/01/97
Date Made Active at EDR: 04/17/98

Date of Last EDR Contact: 12/11/00
Date of Next Scheduled EDR Contact: 03/12/01

EDR PROPRIETARY DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

HISTORICAL AND OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

New Jersey State Wetlands
Source: New Jersey Department of Environmental Protection
This data was obtained by EDR in 1998 from the New Jersey Department of Environmental Protection.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

DUPONT PHARMACEUTICALS CHAMBERS WORKS
ROUTE 130
DEEPWATER, NJ 08069

TARGET PROPERTY COORDINATES

Latitude (North):	39.683701 - 39˚ 41’ 1.3’’
Longitude (West):	75.496002 - 75˚ 29’ 45.6’’
Universal Tranverse Mercator:	Zone 18

UTM Y (Meters):	4392560.0
State Plane X (Feet):	1766581.2
State Plane Y (Feet):	310802.2

EDR’s GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property: 2439075-F4 PENNS GROVE, NJ DE
Source: USGS 7.5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property: Undeterminable

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Q3 Flood Data Electronic Coverage

	3405120003B / CBPP

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Coverage
PENNS GROVE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	2.0 miles
Status:	Not found

AQUIFLOW®

Search Radius: 2.000 Miles.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOLOGIC AGE IDENTIFICATION

Geologic Code:	uK
Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous

ROCK STRATIGRAPHIC UNIT

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Component Name: MATTAPEX

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information

	Boundary			Classification		
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**
1	0 inches	15 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60
2	15 inches	36 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.20
3	36 inches	60 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COURSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 0.60
4	60 inches	65 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COURSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	loam sandy loam sandy clay
Surficial Soil Types:	loam sandy loam sandy clay
Shallow Soil Types:	No Other Soil Types
Deeper Soil Types:	sandy loam very gravelly - sandy loam stratified very fine sandy loam

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

EXECUTIVE SUMMARY

The Corporate Remediation Group has conducted a Phase I Environmental Site Assessment (ESA) of the DuPont Pharmaceuticals Chambers Works Facility, located at DuPont Chambers Works Site in Deepwater, New Jersey. The purpose of this ESA was to identify and document recognized environmental conditions.

Based upon the information gathered by the CRG during the records reviews, the site reconnaissance, and interviews the following conclusions can be made:

- Groundwater use restrictions exist at the DuPont Pharmaceuticals Company Chambers Works Facility as a result of historical operations conducted at the DuPont Chambers Works Site.
- One spill has occurred at the DuPont Pharmaceuticals Company Chambers Works Facility that represents a recognized environmental condition:
  - A 40-gallon spill of Dowtherm to the ground occurred in the area of the Syltherm XLT Super Cold Heat Exchanging System. The affected soils were reportedly excavated but confirmatory soil samples were not collected.
- There are no additional recognized environmental conditions identified as a result of the DuPont Pharmaceuticals Company Chambers Works Facility activities evaluated as part of this Phase I ESA.

1.0 INTRODUCTION

1.1 Purpose

This environmental site assessment (ESA) was conducted to identify recognized environmental conditions that may exist at the DuPont Pharmaceuticals Company Chambers Works Facility. The extent of research to identify recognized environmental conditions is limited by the scope of work, which is described immediately below.

1.2 Detailed Scope of Work

The scope of work conducted for this ESA consisted of the following tasks:

- **Records Review and Interviews:** Practically ascertainable files including files from archived Corporate Remediation Group (CRG) files, historical aerial photographs, historical United States Geological Survey (USGS) topographical maps, and historical plant layout maps were evaluated to characterize past activities on and around the Site. Environmental Data Resources, Inc. (EDR®) conducted a computer search of the available environmental databases specified in the American Society of Testing and Materials (ASTM) Standard Practice E 1527-00 for Phase I Environmental Site Assessments. An interview was conducted with Mr. Joseph Sasso (Facility EHS Generalist) on February 6, 2001 during the site inspection.

- **Site Reconnaissance:** A site reconnaissance was conducted by a URS-Diamond (URS-D) professional from the URS-Diamond Deepwater, New Jersey office. Surface conditions and current activities on the Site and adjoining properties were observed. Potential contaminant sources on and adjoining the Site were documented through visual observations during the field inspection. An ASTM Transaction Screen Questionnaire and a DuPont S2V Due Diligence Questionnaire was distributed to the Facility Environmental Health and Safety Generalist (Joseph Sasso) for completion prior to the site visit. The questionnaires were reviewed during the site reconnaissance activities.

- **Evaluation, Analysis, and Report:** Information collected during the ESA activities was evaluated and analyzed. This report contains a summary of the results of the activities described above as well as a presentation of the conclusions, which have been drawn based on these results.

1.3 User Reliance

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions. Unless Site conditions change, this document and the information contained herein are valid for a period of 180 days according to the ASTM Practice, and have been prepared by CRG solely for the use of the DuPont Pharmaceuticals Company. No third party shall have the right to rely on this document without DuPont’s written consent and the third party's agreement to be bound to the same conditions and limitations as agreed to by all parties.

2.0 SITE DESCRIPTION AND HISTORY

2.1 Site Location

The DuPont Pharmaceuticals Company Chambers Works Facility is located on approximately four acres of land located in the southeastern corner of the DuPont Chambers Works Site, Route 130, Deepwater New Jersey (Figure 1). The Site consists of a main office/laboratory building, several support buildings and storage areas, and a parking area.

2.2 Site Description

The DuPont Pharmaceuticals Company Chambers Works Facility is located within a 1,455-acre active chemical-manufacturing site, which has been in continuous operation for over 100 years. The property is bordered to the east by the residential neighborhood of Deepwater Village, to the north and west by the DuPont Chambers Works chemical manufacturing Facility, which currently is a Resource Conservation Recovery Act (RCRA) Corrective Action Site, and the Salem Canal and Delaware Memorial Bridge border the property to the south.

2.3 Site Geology and Hydrogeology

The Facility's subsurface is a complex sequence of fill material, Holocene alluvial and tidal marsh (peat) deposits, interbedded Pleistocene fluvioglacial deposited (Cape May Formation), and Cretaceous aged deposits (Potomac-Raritan-Magothy Aquifer). The Holocene and Pleistocene deposits comprise a multilayered flow system: the “A” perched water zone, and the “B”,”C” and “D” aquifer zones (also known as the Quaternary Aquifer System). These three units are hydraulically connected to different degrees due to discontinuous interbedded silt and clay layers and also due to past excavation and construction activities. Two of three of these four zones become one zone in some locations. As such, the Quaternary Aquifer System ranges from unconfined to semi-confined conditions.

2.4 Site History

The Chambers Works Site has been engaged in continuous chemical manufacturing activities for over 100 years. Between 1919 and 1940 the areas of “current” DuPont Pharmaceuticals Company Chambers Works Facility operations were used to store finished nitrocellulose (a principle component of gunpowder) prior to shipment. A portion of the DuPont Pharmaceuticals Company Chambers Works Facility was also historically used as a parking lot.

2.5 Current Use

The DuPont Pharmaceuticals Company Chambers Works Facility is part of the Chemical Processes R&D department. Research and development of active pharmaceutical intermediates for scale-up and support of clinical trials and pilot testing for transfer of products to manufacturing are completed at this Facility. Specific activities may include:

- Laboratory scale tests using small (100 grams) amounts of material in laboratory building M-1.
- Kilo scale tests using intermediate (kilogram) amounts of material in building M-2.
- Pilot scale tests using larger amounts of material in buildings M-6 and M-2.

Materials used in these processes include:

- Toluene
- Methanol
- Acetone
- Acetonitrile
- Hydrochloric Acid
- Acetic Acid
- Sodium Hydroxide

A complete listing of the current and former primary materials received and stored on-site as well as the approximate volume stored/used is available at the Facility for review, but was not provided in the S2V Questionnaire.

3.0 RECORDS REVIEW

The purpose of the records review was to identify historical/current activities conducted on or near the DuPont Pharmaceuticals Company Chambers Works Facility that may represent recognized environmental conditions. Relevant CRG files located at the Chambers Works Site DuPont Pharmaceuticals Company Chambers Works Facility files were reviewed as part of this task. Environmental Data Resources, Inc. (EDR®) conducted a computer search of the available environmental databases specified in the American Society of Testing and Measures (ASTM) Standard Practice E 1527-00 for Phase I Environmental Site Assessments. EDR® also supplied United States Geological Survey (USGS) 7.5-Minute Topographic Maps for evaluation of the chronological development of the DuPont Pharmaceuticals Company Chambers Works Facility. Aerial photographs dated 1940, 1951, 1959, 1965, 1975, 1981, 1988, 1994 and 1998 were also obtained for review.

3.1 File Review

The DuPont Pharmaceuticals Company Chambers Works Facility is included in the Chambers Works Discharge, Prevention, Containment, and Countermeasure (DPCC) and Discharge Cleanup and Removal (DCR) Plans which became effective on June 14, 1999. The DPCC/DCR outlines procedures for the handling, storage, spill control, and spill reporting of hazardous substances and is required by the New Jersey Department of Environmental Protection. The Facility is also included in the Chambers Works Stormwater Pollution Prevention Plan (SPPP) which outlines Best Management Practices (BMPs) for pollution prevention for the entire Chambers Works Site.

Various environmental investigations have been completed at the DuPont Chambers Works Site. Results of these investigations indicate that groundwater at the Chambers Works Site has been impacted by historical Site operations. A groundwater interceptor system has been installed at the Chambers Works Site as part of ongoing remedial efforts. A Phase III RCRA Facility Investigation is currently underway at the Chambers Works Site.

3.2 EDR® Database Search

The results of the EDR® database search were used to identify potential sources of contamination within one mile of the Site. The EDR® database search is included as Appendix B**.** The following information was obtained by EDR®'s search of the databases listed above:

- EDR® reported no NPL sites located within one mile of the Site.
- EDR® reported no RCRIS Large Quantity generators located within 0.25 miles of the DuPont Pharmaceuticals Company Chambers Works Facility.
- EDR® reported no RCRIS Small Quantity generators located within 0.25 miles of the DuPont Pharmaceuticals Company Chambers Works Facility.
- EDR® reported one RCRA Corracts Facility within 0.5 to one miles of the DuPont Pharmaceuticals Company Chambers Works Facility.
- EDR® reported one state hazardous waste site within 0.25 to 0.5 miles of the DuPont Pharmaceuticals Company Chambers Works Facility.
- EDR® reported two state hazardous waste sites within 0.25 to one mile of the DuPont Pharmaceuticals Company Chambers Works Facility.
- There were 39 sites that were found in at least one of the databases searched, which could not be mapped due to poor or inadequate address information.

3.3 Historical Aerial Photograph/Topographic Map Review

Aerial photographs dated 1940, 1951, 1959, 1965, 1975, 1981, 1988, 1994 and 1998 were obtained for review. The April 21, 1994 historical aerial photograph is included as Appendix C. Historical Chambers Works plant layout maps from 1919 to present were also reviewed. In addition, United States Geological Survey (USGS) 7.5 Minute Topographic Maps of the Penns Grove, New Jersey Quadrangle dated 1897, 1955, 1969, and 1979 were obtained from EDR® for evaluation of the chronological development of the site. For the purposes of this ESA, the review was limited to the area bounded by the railroad tracks to the east, Canal Road to the south, Shinn Road to the west, and Corral Road to the north (see Benchmark 12 on the 1995 topographical map). This area is located just northeast of the Main Gate.

3.3.1 Historical Aerial Photographs

1919 Plant Layout Map: In 1919 several storage buildings (powder magazines) were located on the target property. These storage buildings were reportedly used to store finished nitrocellulose prior to shipment off-site. These buildings were connected together by a system of narrow gauge railroad lines for transporting the nitrocellulose by mule team or push cart. The buildings were spaced several hundred yards apart to prevent secondary detonation in the event of accidental explosion, and no other structures were located in the area. Salem Canal borders the property to the south. A residential area (Deepwater Village) bordered the site to the east. Additional powder magazines bordered the site to the north, and the Chambers Works Dye production area was located to the west.

1940 Photograph: In 1940 the site was vacant. The powder magazines and narrow gauge railroad lines had been removed and there were no structures evident, although the locations of the former structures were faintly visible. Expansion of Deepwater Village to the east and the Chambers Works Dye production area to the west were evident. Railroad lines were located along the northern and eastern perimeter of the site. Shinn Road running north to south marks the western boundary of the site. The southern perimeter of the site was marked by Canal Road, which ran east to west along the northern bank of Salem Canal.

1951 Photograph: In 1951 the western edge of the site was occupied by a parking area (Parking Corral A), but the majority of the site was vacant. Expansion of the Chambers Works Dye production area to the west was evident, and construction of the Delaware Memorial Bridge was underway to the south.

1959 Photograph: In 1959 the parking lot had extended to the east and occupied the entire northern half of the site. A road (Parking Corral A Road) bisects the parking lot and ran east to west. The southern half of the site not covered by the parking lot was vacant. A large building (Consolidated Warehouse) was located directly north of the site on the north side of the railroad tracks.

1965 Photograph: The site and adjacent property appeared unchanged.

1975 Photograph: The parking lot in the northern half of the site appeared unused. A groundwater remediation pumping well had been constructed in the formerly vacant southern portion of the site. An underground pipeline had been constructed from the well and ran through the center of the site to the west where it tied in to a water main adjacent and parallel to Shinn Road.

1981 Photograph: The site and adjacent property appear unchanged.

1988 Photograph: The site and adjacent property appear unchanged.

1994 Photograph: The DuPont Pharmaceuticals Company Chambers Works Facility was located on the site. This Facility was constructed in 1991.

1998 Photograph: The site and adjacent property appear unchanged in comparison to the 1994 photograph.

3.3.2 Historical Topographical Maps

1951 Historical Topographical Map: The 1951 topographical map indicates that the plant was in existence at that time. The area of interest had one building located on it that was subsequently identified on a site plot as the CAER Building. This building was located southwest of the subject property just inside the Main Gate. No other buildings were located in the area of review.

1967 Historical Topographical Map: The subject property appeared the same as it did in the previous topographical map.

1976 Historical Topographical Map: The subject property appeared the same as it did in the previous topographical map.

1993 Historical Topographical Map: The subject property appeared the same as it did in the previous topographical map.

1995 Historical Topographical Map: The subject property appeared the same as it did in the previous topographical map. The building of interest was not present.

4.0 SITE RECONNAISSANCE

A site reconnaissance team, consisting of Mr. Frank Smith (DuPont CRG), Mr. Joseph Sasso (DuPont Pharma) and Scott Norcross (URS) conducted a field investigation on February 6, 2001 to identify current DuPont Pharmaceuticals Company Chambers Works Facility uses and potential sources of hazardous substances on-site and off-site. The weather was cold with partly cloudy skies. This reconnaissance was conducted by first inspecting interior laboratory and office spaces in main buildings M-1 and M-2. The exterior of the DuPont Pharmaceuticals Company Chambers Works Facility was then inspected by visiting each outbuilding and area of interest. The adjoining properties were viewed from the DuPont Pharmaceuticals Company Chambers Works Facility during the exterior inspection.

The site reconnaissance also included a review of available environmental records/documents, review of the ASTM and S2V questionnaires, and interviews of site personnel. During the interview conducted with the site EHS Generalist, the questionnaires were reviewed for accuracy and completeness. An electronic copy of the completed ASTM Transaction Screen Questionnaire and a summary of affirmative responses to the questionnaire are included as Appendix D.

4.1 Exterior Observations

The DuPont Pharmaceuticals Company Chambers Works Facility and adjacent properties are shown on Figure 2. Appendix E includes all photographs taken during the Site reconnaissance. Figure 2 depicts the locations and presents select photographs taken on the DuPont Pharmaceuticals Company Chambers Works Facility. A perimeter fence that separates the DuPont Pharmaceuticals Company Chambers Works Facility from the residential area to the east and the chemical manufacturing areas to the north and west encloses the site. Entry to the site is from the parking area located on the western end of the site. A grassy field separates the operational areas from the residential area located to the east. The exterior of the main building was well maintained and the surrounding area was landscaped.

The following features were observed (see Appendix E for photographs):

- The main building (M-1, M-2) was completed in 1991 and an expansion to the pilot plant (M-6) was completed in 1999, extending the building to the west. (Photograph 1).

- The flammable solvent storage building (M-3) was in good order and all containers observed were appropriately labeled. The concrete floor was coated with an epoxy resin type floor coating within the last four months. There were no floor cracks, or evidence of spills observed. A grated trench is located in front of the main door to prevent water from entering the structure. A 90-day waste storage area is contained in building M-3 (Photograph 2)

- The gas cylinder storage pad was observed to be in good order. (Photograph 3).

- The Syltherm XLT (Dowtherm) Super Cold Heat Exchanging System was the site of a spill in March 1998. A small quantity (approximately 40 gallons) of Dowtherm was released to the soil as a result of a heat exchanger failure. The release was contained on-site with no off-site impacts. The contaminated soil was reportedly collected and was scheduled for appropriate disposal. No confirmatory soil samples were reportedly collected. No reporting to regulatory agencies was required. The Super Cold Heat Exchanging System is now equipped with a concrete containment pad. (Photograph 4).

- The new Electrical Substation and Emergency Generator Pad (constructed in 1999) was observed to be in good condition. The base of the emergency generator is fitted with a double walled diesel fuel tank (approximately 75 gallons). There was no evidence of fuel spills observed during site reconnaissance activities.

- Several small domestic underground sewage solid separation tanks are located on the property. These tanks are for the collection of sanitary waste water and allow the solids to settle out. Overflow from these tanks is directed to the wastewater tank, which is then transported to the Chambers Works Site's Waste Water Treatment Plant (WWTP). The solids from this tank are periodically pumped out by a local contractor and disposed of at a municipal sewage treatment Facility. No spills were reported to have occurred from these areas.

- The wastewater tank is an underground tank that collects overflow from the small domestic sewage solid separation tanks and process water. The tank is constructed of fiberglass reinforced plastic (FRP) within a below grade open topped secondary containment pit of concrete construction. This tank has reportedly overflowed twice in the last three years releasing unknown quantities of process and sanitary waste waters to the secondary containment pit. A sump pump is in place within this pit, which transferred the overflowed waste to the Chambers Works Facility WWTP. Visual inspection of the pit revealed no cracking or physical damage therefore; the probability of a release to soils or groundwater from the overflows is low. Neither of these spills was reported to be of a sufficient quantity to be disclosed to regulatory agencies.

- The recently added chiller pad was observed to be in good condition (Photograph 5).

- The new hydrogen gas cylinder storage pad was observed to be in good condition.

- DuPont Experimental Station personnel inspect the 90-day drum storage pad. A crack in the pad foundation has been repaired by cutting a “V” notch in the cement and filling with epoxy (Photograph 6). There was no evidence of spills visually observed by the site reconnaissance team on the storage pad.

- A dumpster staging area was observed north of M-1 for trash and recyclables. The dumpsters were observed sitting on asphalt covered areas and were neat and orderly.

Solid waste (excluding trash and recyclables) generated at the DuPont Pharmaceuticals Company Chambers Works Facility are managed by DuPont’s Facility Services (DFS) group. The majority of the wastes are disposed of at the Experimental Station incinerator. Streams that cannot be managed by the incinerator are disposed of at DuPont approved treatment storage and disposal facilities.

All wastewater generated on site is collected in the wastewater collection sump and then pumped into the Chambers Works wastewater collection system. The wastewater collection tank is equipped with secondary containment. Surface water runoff from the paved areas is directed into the Chambers Works storm water system and administered in accordance with the Chambers Works Storm Water Pollution Prevention Plan.

There are no wells located on site. A former groundwater remediation pumping well (L04-R01CD) located on the southeastern portion of the site was sealed and removed prior to 1990. Several monitor wells located near the site are part of the DuPont Chambers Works groundwater monitoring system. Most site potable water is obtained from the Chambers Works Facility via an overhead pipe. The site also receives a supply of water from the local water utility (Pennsville Water Company).

All site domestic sewage is collected in solid separation tanks. Liquids from these tanks overflow into the wastewater collection sump, and solids are periodically removed and sent off-site for disposal.

4.2 Interior Observations

A visual inspection was also conducted of the interior of the main DuPont Pharmaceuticals Company Chambers Works Facility building and the two on-site structures by URSD personnel during the site reconnaissance. Brief descriptions of the areas observed are as follows:

All buildings on site are less than ten years old. No significant exposure issues (i.e. asbestos or PCBs) were observed.

Each laboratory was observed to be similarly configured with vinyl composite floor tiles and furnished with laboratory benches, fume hoods, flammable liquid storage cabinets, and fire extinguishers. Use of the laboratory sinks is limited to general use only and drain to the general waste water collection tank.

The general conditions of the laboratories were found to be excellent, with no evidence of stains or deterioration on any of the walls, floors, ceilings or furniture. Housekeeping was generally found to be neat and orderly with minimal excess materials storage noted.

Various types of hazardous materials in laboratory-scale quantities are stored in closed containers in flammable liquid storage cabinets or similarly designed cabinets for corrosive materials that are built-into the base of the fume hoods. Containers of hazardous materials and laboratory apparatus were also present in the fume hood enclosure along with waste satellite accumulation containers.

A waste accumulation area was observed on the second floor of the laboratory building (M-1). This area is used for temporary storage of hazardous wastes (i.e. used solvents) in small sealed containers until sufficient quantities have accumulated for transferred to the appropriate collection areas. There were no floor drains observed in this area and the containers observed were labeled, neat, and orderly.

All wastewater is transported from drains and tanks to the wastewater collection tank. All buried piping is of double walled construction.

All process areas were observed to be in good condition and organized in a neat and orderly fashion.

Facility cooling is accomplished via water chillers that were discussed in previous sections of this report. Heat is supplied via steam, which is piped from the DuPont Chambers Works Site.

5.0 FINDINGS

- The DuPont Pharmaceuticals Company Chambers Works Facility is located on approximately 4 acres within an active chemical-manufacturing site (DuPont Chambers Works Site).

- Operations at the DuPont Pharmaceuticals Company Chambers Works Facility include pharmaceutical research and development of active pharmaceutical intermediates for scale-up and support of clinical trials and transfer to manufacturing.

- Historical uses of the property have included nitrocellulose storage and a parking lot.

- Contaminated groundwater may exist at the DuPont Pharmaceuticals Company Chambers Works Facility as the result of historical activities at the adjacent DuPont Chambers Works Site.

- Adjacent property to the north and west (DuPont Chambers Works Site) is currently a RCRA Corrective Action Site.

- All buildings on the DuPont Pharmaceuticals Company Chambers Works Facility are less than ten years old and no issues were observed during site reconnaissance activities.

- Housekeeping and waste management practices throughout the site were found to be excellent.

- There are no known potential sources of polychlorinated biphenyls (PCBs) at the DuPont Pharmaceuticals Company Chambers Works Facility.

- There are no known petroleum underground storage tanks (USTs) located at the DuPont Pharmaceuticals Company Chambers Works Facility; however there are several small domestic sewage solid separation USTs.

- A wastewater tank, which is constructed of FRP exists on the DuPont Pharmaceuticals Company Chambers Works Facility within a below grade open topped secondary containment pit of concrete construction. This tank collects overflow from the small domestic sewage solid separation tanks and process water. This tank has reportedly overflowed twice in the last three years releasing unknown quantities of process and sanitary waste waters to the secondary containment pit. A sump pump is in place within this pit, which transferred the overflowed waste to the Chambers Works Facility WWTP. Visual inspection of the pit revealed no cracking or physical damage therefore; the probability of a release to soils or groundwater from the overflows is low. Neither of these spills was reported to be of a sufficient quantity to be disclosed to regulatory agencies.

- The Syltherm XLT (Dowtherm) Super Cold Heat Exchanging System was the site of a spill in March 1998. Approximately 40 gallons of Dowtherm was released to the soil as a result of a heat exchanger failure. The contaminated soil was reportedly collected and disposed. No confirmatory soil samples were reportedly collected. No reporting to regulatory agencies was required.

6.0 CONCLUSIONS

An Environmental Assessment is a screening process intended to identify potential environmental conditions at a site but is not intended to be a complete characterization of site conditions. The CRG has performed an Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-00 and DuPont S2V Corporate Standard for Acquisitions and Divestitures for the DuPont Pharmaceuticals Chambers Works Facility as described previously. Based upon the information gathered by the CRG during the records reviews, the site reconnaissance, and interviews the following conclusions can be made:

- Groundwater use restrictions exist at the DuPont Pharmaceuticals Company Chambers Works Facility as a result of historical operations completed at the DuPont Chambers Works Site.

- One spill has occurred at the DuPont Pharmaceuticals Company Chambers Works Facility that represents a recognized environmental condition:

    - A 40-gallon spill of Dowtherm to the ground occurred in the area of the Syltherm XLT Super Cold Heat Exchanging System. The affected soils were reportedly excavated but confirmatory soil samples were not collected.

- There are no additional recognized environmental conditions identified as a result of the DuPont Pharmaceuticals Chambers Works Facility activities evaluated as part of this Phase I ESA.

APPENDIX C

SITE HISTORY AND REGULATORY BACKGROUND

Site History and Regulatory Background

General Manufacturing History

1891	The Thomas Carney farm was purchased for $17,000 and re-conveyed by deed to Eugene, Francis G., Henry A., Alexis I., Charles I., and Alfred I., trading as E.I. du Pont de Nemours & Company (DuPont) on July 19, 1891. A considerable portion of the ground was marshland.
1892	The old Carney farmhouse remained and crops were harvested during the initial plant construction. Initial construction consisted of seven buildings, including a boiler house, laboratory, and magazine; dock and rail service from cart roads was in operation by 1892.
	The first guncotton was produced in June 1892 and by the end of the year 100,000 pounds was delivered to the Navy.
	Carneys Point smokeless gunpowder plant was constructed at the northern end of Carneys Point and consisted of Plant 1, 2, 3, and 4 in the early 1900s. The plants produced nitrocellulose and gunpowder. The materials involved in production included ether, amines, plasticizers, nitrotoluenes, nitroglycerin salts, nitric acid, and sulfuric acid. Off-quality nitrocellulose was the primary waste from this area.
1894	A new formula of commercial grade smokeless gunpowder for hunting was put into production.
1898	Carneys Point Works began expanding in order to produce nitrocellulose explosives for military use.
1914	DuPont made millions of pounds of powder (TNT and guncotton) for many countries, which resulted in tremendous expansion of the plant facilities. During WWI, buildings were placed into operation at Plants 1, 2, 3, and 4. Gunpowder manufacturing operations had extended south into what is currently the Chambers Works facility.
	During WWI, DuPont started construction of Carneys Point village, which ultimately had several hundred bungalows and two-story houses as well as rows of dormitories and apartment buildings. In all, DuPont erected roughly 2,200 buildings including housing units and various service facilities during WWI. After the Armistice, the barracks and apartment buildings were razed, and many of the bungalows were sold to private bidders and moved. During WWI, the Powder Works (or Carneys Point Works) had hundreds of manufacturing, storage, and service buildings scattered between Carneys Point and the Deepwater Canal (Salem Canal). The Plant 2 gate was located at Shell Road nearly opposite the current Clemente Garage. The Plant 3 gate was further to the south near the road curve above Deepwater. The rail tracks from Plant 3 to the Deepwater Point pier were constructed in the winter of 1915-16, primarily for ocean-going shipment of gunpowder and explosives.
1915	Facilities for the extraction of benzene, toluene, naphthalene and other hydrocarbon fractionations, coaltar were installed in two sheetmetal clad stillhouses located near the riverfront.

1915	Another unit, sometimes referred to as Plant 4 (but in actuality not part of the Powder Works organization) was constructed at Deepwater Point. This plant was established by the Explosives Department for the manufacture of picric acid by the nitration of phenol and production of dimethylaniline (DMA) for conversion to tetryl. This plant, eventually known as the "High Explosive Plant," was built in the Deepwater Point area because the area had natural fire barriers, was in proximity to Carneys Point Works (and its transportation and process water supply) and had room for expansion.
	The first picric acid was produced in June 1915.
	The Saltpeter Plant was built (near the waterfront about midway between the Explosive Plant and Salem Canal mouth) to refine crude nitrate by removing impurities and providing high quality sodium nitrate to the powder plants.
1916	Production of benzene, toluene, xylene, naphthalene, solvent naphtha was increased by the addition of the cracking plant.
	In March, the Organic Chemicals Division developed a limited number of fundamental dye procedures. Based on these developments, DuPont formed a Miscellaneous Manufacturing Department. The site on which the Dye Works was built was adjacent to the old High Explosives Plant, on the south and southeastern side of that plant.
	Early buildings constructed in Deepwater for the Dye Works included a plant to produce chlorine and caustic soda and via electolysis of salt (erected in 1916-1917), a sodium plant, the Phenylglycine Building (an intermediate for the Indigo Factory), other intermediate manufacturing facilities, the Azo Color Manufacturing facilities, the Basic and Sulfur Color Manufacturing facilities, the Powerhouse, the Sulfuric Acid plant, the Anthracene Color manufacturing buildings, and Jackson Laboratory No. 1 (finished late in 1917). The old Locuson farmhouse became the administration building.
	Dye and specialty chemical manufacturing began at what was then called the Dye Works (currently Chambers Works). Production ran until 1979; roughly 700 different dyes were produced.
1917	The Dye Works expanded its product line to synthetic camphor. A process was developed at the DuPont Experimental Station (Wilmington, Delaware), and a plant was built at the Dye Works along Salem Canal, approximately where the White Products plant exists.
	The Indigo Heavy Chemicals Area began operation producing indigo dye, sulfuric acid, and chlorine. Other chemicals associated with this area included sodium hydroxide, hydrochloric acid, ammonia, sodium, sulfur, benzene, nitrobenzene, nitrotoluene, chlorobenzene (CB), methylamines, and ethyl chloride.

1917	The picric acid manufacturing was augmented by a supplementary process and equipment to make ammonium picrate used in American military explosives.
	In the spring of 1917, equipment in the picric acid building of the Deepwater High Explosives plant was adapted to make dyes. The Sulfur Colors manufacturing division used sulfur and sodium sulfides. Sulfur black, the first dye made and sold by DuPont, was made from picric acid, dinitrophenol, and polysulfide. Manufacture of sulfur black continued at the same buildings until 1934.
	By the end of 1917, the chemicals being produced at the Dye Works included benzoic acid, metallic sodium, mononitrotoluene, ortho- and para-toluidine, and centralite. The first dye intermediate made at Dye Works was sulfanilic acid.
	At the peak of activity in 1917 about 25,000 people worked at Carneys Point Works.
1918	Three original intermediate areas, Naphthalene, Miscellaneous, and Benzol began production in May 1918.
	After the Armistice in 1918, military orders for explosives were canceled, and the Powder Works slowly contracted as the Dye Works expanded. Plant 3 became the High Explosives Plant for the Dye Works and later, the “Kinetic” or “Freon® Area,” and Plant 2 became the Cogeneration Plant.
	During the early months of 1918, other colors made their debut including auramine, indigo, and other sulfur colors. Azo colors went into production in May 1918, followed closely by basic colors in October, and anthracene colors in February 1919. Based on financial records, about 20 individual compounds were made during 1917, and 118 during 1918.
1920	The Fluorochemicals Production Area, which produced Freon products, began operations in the 1920s and manufactured fluorinated hydrocarbons from hydrofluoroic acid, sulfuric acid, hydrochloric acid, carbon tetrachloride, fluorospar (solid), antimony, pentachloride catalyst, and perchloroethylene (PCE). DuPont has phased out four chlorofluorocarbon (CFC) productions and replaced the with the SUVA® product line, which includes hydrochlorofluorocarbons (HCFCs) and hydrofluorocarbons (HFCs).
1920-1921	During 1920 and 1921, most of the Dye Works operated for only two or three days a week for several months with a minimal labor force. By 1921, the Dye Works had reduced its workforce by about 1,000 people.
1922	The Hydrosulfite Building began to produce aniline sulfate for the rubber industry.
1922-1932	From 1922 until 1932 the Dye Works workforce averaged about 2,000 people.
1923	In 1923, tetraethyl lead was produced for the first time on a commercial scale.
1925	In 1925, Eastern Alcohol Company (DuPont held a 50% interest) started to manufacture ethyl alcohol by fermentation of molasses.

1920s	Production of a refrigerant (Kinetic or Freon) and tetraethyl lead (TEL, a gasoline antiknocking agent) began in the 1920s.
	The Motor Fuel Antiknock Production Area produced motor fuel antiknock compound (MFAC), which contained TEL and tetramethyl lead from sodium, ethylene, methanol, methyl chloride, and ethyl chloride. The lead alkyls are the primary waste from this area.
1930	The Freon products industry began in the early 1930s with the development of an economic process for making hydrofluoric acid (Building K-2), from which a whole series of fluorinated products and polymers could be derived.
	The Jackson and Technical Laboratories were used mainly for research and development activities; the Semi-works Area was used mainly for new product manufacturing start-up.
	In addition to the major areas at Chambers Works, supporting operations throughout the site included the Powerhouse and General Services, a fire station, a medical building, the Administration Building, and shop buildings.
	Facilities for the production of Freon refrigerants also grew through the mid-1930s.
1931	In 1931, the “Kinetic” Chemicals Corporation, jointly owned by DuPont and General Motors, built a plant for the manufacture of fluorinated hydrocarbons used as refrigerants.
	Experimental production of Neoprene® began.
1932	A plant for manufacturing synthetic camphor using a newly developed process was built in 1932. Camphor was the first organic chemical manufactured at the Dye Works that was not directly connected to dyes.
1933	TEL “D” Building was construction and began operations.
1935	The erection of the TEL “E” Building brought the greatest increase in TEL production.
1938	The Carrollville Works plant was abandoned, and some operating personnel were transferred to the Dye Works.
1938	Buildings for manufacturing Neoprene were erected in the northeast end of the plant, but on January 23, 1938, an explosion wrecked the plant. The Neoprene plant was rebuilt in a three months.
1930s	DuPont purchased the Newport Chemical Company, which included a plant at Carrollville, Wisconsin for the manufacturing of dyes and intermediates, and a plant at New Brunswick, New Jersey, where aromatics, photographic chemicals and “Cel-O-Glass” were made. After the purchase, the manufacture of “Ponsol” colors gradually decreased at the Dye Works and moved over to the Carrollville Works.
1940	The Aromatics and Specialty Chemicals manufacturing area began production in the 1940s and is still one of the primary manufacturing areas. Materials involved in this area include petroleum hydrocarbons, acids, solvents, inorganic constituents, and aromatic hydrocarbons.

1940s	Aromatic chemical manufacturing in the 1940s.
	Throughout the war years, all equipment on the plant was operated at peak capacity. Important direct contributions to the war effort were neoprene, TEL, colors for uniforms, smoke signal colors, Freon fluorocarbons for aerosols and refrigerants, phthalic anhydride for finishes and for a plasticizer for smokeless powder, dinitrotoluene, rubber chemicals, petroleum chemicals, para-nitrobenzoic acid for procaine, chlorobenzene used in making chloroguanide, an antimalarial, and resorcin which was used in an adhesive for airplane tires.
1943	The Deepwater Works played a role in the Manhattan Project, so named because it was managed within the U.S. Army Manhattan Engineering District (MED) during the war. The program started in early 1943 with the organization of the Blue Products Area east of the Alcohol Plant. The old Gylcerine Fermentation Building and three smaller structures were converted to its use, together with a large three-story steel building erected with material brought from the Carrollville Works, which was readapted for use as the present Miscellaneous Stores Building after the war. In late 1943, a group of new buildings were erected east of the “Ponsol” Colors No. 2 for the Manhattan District Project and was known as the East Area. Both the Blue Products Area and East Area were under maximum security and were surrounded by individual fences within the plant’s regular fence. A special patrol was maintained for each by the police force.
1944	More stringent restrictions of personnel entry and exit were enacted during the war years to meet governmental regulations; new auto parking corrals for workers were established outside of the plant fence, including one large area southeast of the “Ponsol” area and another across the canal from the Administration Building. In late 1944, the employment at the Dye Works reached a high of 9,169 employees.
	On April 7, 1944, the name of the plant was changed from Dye Works to Chambers Works in honor of A.D. Chambers.
1945	DuPont research and production of petroleum chemicals at Deepwater grew through the war years, and in December 1945 the former Alcohol and TEL divisions were merged into an established Orchem Department. Because of war-time limitations, the plant did not go through normal expansion or replacement of facilities. Therefore, after the war, many new projects were started including: a new wing of Administration Building, a new White Products building “888”, the new Monastral Building (east of Ponsol), a new benzidine building, and other projects for Freon and intermediates manufacturing.
	After the war, some of the buildings in these areas were dismantled, while others were converted for use by the Petroleum Laboratory, Technical Laboratory Annex, “Ponsol” Colors Stores, or the Industrial Hygiene Laboratory.
1945	From the pre-war period on, the Dye Works was beset with problems arising from shortages of raw materials. Due to shortages, in some instances, the basic materials or plant processes were adapted to use more of the available materials, or production schedules were shifted.
1947	The new “BHNA” building replaced one destroyed by an explosion in January 1947.

1949	The original contact Sulfuric Acid Plant was replaced with a new Monsanto-Leonard unit after 31 years of continuous operation.
	In August 1949, the present Broadway extension and plant gate went into use.
1950	In February 1950, ground was broken for a new continuous process TEL building.
	On July 1, 1950 "Kinetic" Chemicals, Inc. became wholly owned by DuPont, and its functions were assigned to the Orchem Department.
1951	In October 1951, dredging of the wastewater impounding basin (in use for 25 years) began. Some 600,000 cubic yards of sediment was pumped to other low areas at Chambers Works.
1953	In May 1953, bulk shipment of Freon in railroad tank cars began.
	Operations at the Deepwater Alcohol Plant ceased in 1953. Pure Carbonic Company continued manufacturing dry ice via petroleum combustion equipment.
1954	Demolition and salvage activities from the Alcohol Plant were underway. The huge molasses storage tanks and several large tile buildings were razed.
	Construction of a huge new consolidated warehouse for Chambers Works was started and was completed in 1955.
1956	For several years, Chambers Works had conducted research and pilot plant manufacturing of new product, polyisocyanates ("Hylene"). A new plant was erected on the site of the old Neoprene Fort Buildings and production was well under way by early 1956.
	In April 1956, use of the name "Kinetic" in conjunction with the sale and manufacture of fluorinated hydrocarbons was discontinued and was henceforth known as Freon Division and as the Freon Area.
	In September 1956, the demolition of the old "Ponsol" No. 1 Colors Building occurred. The building had been built in 1919 for the manufacture of Beta-amine intermediates and dyes.
	In May 1956, bulk shipment by sea of TEL antiknock compound began. The ship was to go to Texas ports and bring cargoes of ethyl chloride and ethylene dichloride on its return trips.
1957	DuPont established an independent Elastomers Department to handle the manufacture, sale, and development of neoprene, "Hylene" isocyantes, "Hypalon" synthetic rubbers and various rubber chemicals.
	The Silver Salt building and Silver Salt Sublimer house, and the original Phenylglycine buildings, were demolished.
	The Elastomers Area began commercial production of "Viton" synthetic rubber in April 1957.
	In October 1957, government and company approvals were announced for the installation of equipment through which liquid runoff would be piped to the bottom of the river channel.

1957	The Naphthalene Intermediates and Azo Colors Areas were placed into one group.
	In the spring of 1957, new wastewater disposal facilities at the riverfront north of Deepwater Point began. The construction included a drive piling and erection of a trestle-supported wooden pipeline extending from the plant's settling basin 1,200 feet into the river where wastewater was to be discharged in deep water. In addition, additional dredging of sludge accumulations from the settling basin was conducted in preparation for the new pipeline system.
1960s	In the 1960s, Chambers Works began elastomers production.
1970s-1980s	By the late 1970s and early 1980s, the explosive and dye manufacturing divisions were discontinued, leaving only chemical manufacturing.
1979	Dye production ended.
	Most of the Carneys Point buildings were razed by 1979, leaving behind only building foundations.
1991	The Motor Fuel Antiknock Production Area ceased production spring of 1991.
	TEL production was discontinued in the spring of 1991.
	Cogeneration facility was constructed in 1991.
2006	The only current active waste handling areas are the Resource Conservation and Recovery Act (RCRA)-permitted secure landfill, which is known as the Secure C Landfill and is located north of both Henby Creek and the wastewater treatment plant (WWTP). An electric Cogeneration facility is located east of the WWTP.

Environmental Permits

As per NJDEP Technical Regulations N.J.A.C. 7:26E-3.1(c)(4) (xii) all Federal, State, and local environmental permits including permits for all previous and current owners or operators, applied or received, or both, for the site need to be identified. The Chambers Works Complex is subject to a variety of federal and state environmental regulations and permits, and during various remedial activities, numerous permits have been received. The site-wide permits that are currently in effect are described below.

Hazardous and Solid Waste Amendment (HSWA) Permit

The Chambers Works Resource Conservation and Recovery Act (RCRA) Corrective Action Program is under the jurisdiction of the United States Environmental Protection Agency (USEPA) through a Hazardous and Solid Waste Amendments of 1984 (HSWA) permit. The USEPA issued the HSWA permit to the Chambers Works Complex on November 7, 1988. On May 7, 1993, DuPont submitted an application to the USEPA for renewing its HSWA Permit No. NJ002385730, six months prior to the November 7, 1993, expiration date. The Regional Administrator has not issued a new HSWA permit. Therefore, in accordance with 40 CRF 270.51, the 1988 HSWA permit remains in effect until a new permit is issued.

Secure C Landfill Permits

DuPont has operated the Secure C Landfill at the Chambers Works Complex since 1975. The landfill covers approximately 29 acres and consists of six areas (formerly called "cells"). Area 1 of the Secure C Landfill was taken out of service in 1978 (closure was completed in 1979). Areas 2,3,4, 5A and 5B are currently active and are permitted as RCRA secure landfill, Permit No. 1708C1HP01. The entire landfill is lined. Areas 2,3,4, 5A, and 5B have leak-detection systems between the liners to monitor for seepage through the upper liner. A leachate collection system for removing accumulated leachate from the liners is provided in all five areas and these areas are monitored in accordance with the Ground Water Protection Plan of the NJPDES-DGW Permit No. NJ0105872.

NJPDES-Discharge to Groundwater Permits

The DuPont Chambers Works Complex has two NJPDES-DGW Permits. A brief description of each permit follows in the section below.

NJPDES-DGW Permit No. NJ0083429 governs the discharge to groundwater from areas monitored under the site remediation program, expiring on February 1, 2010. The following groundwater programs are required under this permit:

- Basin Post Closure Monitoring
- Corrective Action Monitoring at Secure C Landfill (Area 1)
- Perimeter Monitoring Program
- Post Closure Monitoring for RCRA Units
- PFOA Monitoring Program

This permit also requires the operation of three separate groundwater recovery programs for hydraulic containment of groundwater at the Chambers Works Complex. All recovered groundwater is diverted to the WWTP for treatment prior to discharge to the Delaware River. The recovery systems consists of the following:

- Interceptor Well System (IWS) – The IWS includes six recovery wells (K06-R02CD, R09-R02C, H11-R01CD, M14-R02CD, Q13-R01C, and Q13-R01D) that must pump a monthly daily average of 1.5 mgd under NJPDES-DGW Permit No. NJ0083429.
- Corrective Action for Area 1 of the Secure C Landfill – The groundwater recovery system was designed and implemented to control groundwater flow and recover impacted groundwater associated with Area 1 of Secure C Landfill. Wells Q20-M02B and R20-M02B are used as groundwater recovery wells, which are pumped into Sumps 1 and 2 of the leachate collection system. The impacted groundwater is then transported to the WWTP for treatment.
- E Aquifer Recovery Well J05-W01E – Groundwater flow in the E Aquifer is influenced by pumping recovery well J05-W01E and well water supply well R15-W01E. DuPont has previously demonstrated to NJDEP in the E Aquifer Technical Memorandum (DERS, 1996) that pumping of 200 gallons per minute (gpm) from J05-W01E contains the groundwater in the E Aquifer along the southern site boundary.

- Pursuant to the February 1, 1993 Groundwater-Quality Standards (N.J.A.C. 7:9-6 et seq.) the NJDEP has designated two classification exception areas (CEAs) for the groundwater beneath the Chambers Works Complex in Pennsville and Carneys Point Townships. The Department based this decision on the following:
  - The groundwater at the site is hydraulically controlled by groundwater recovery systems necessary for the protection of human health and the environment.
  - DuPont signed and Administrative Consent Order with the Department in which they committed to remediating the RCRA land disposal units at the site.
  - DuPont is complying with their EPA Hazardous and Solid Waste Management Permit, which requires DuPont to identify and reduce the sources of contamination on-site.
  - Use of the property for industrial purposes is expected to continue in the future.
  - The constituent standards have been exceeded for a number of constituents at the site.

A Classification Exception Area (CEA) has the effect of suspending the designated uses (potable Class IIA Quaternary Aquifer and Potomac Raritan Magothy (PRM) Aquifer System beneath the site) and constituent standards in the indicated area of operation of the recovery systems for the duration of this NJPDES/DGW Permit. The southern portion of CEA 1 includes groundwater beneath Lots 1,2,3,4 & 5, of Block 301, Pennsville Township, Salem County. The northern portion of CEA 1 includes Lots 1, 2, and 3 of Block 185 and Lot 5, Block 193 of Carneys Point Township, Salem County to a depth of approximately 200 feet. CEA 1 now includes the ball fields in Lot 5, Block 193. CEA 2 includes groundwater beneath Lots 1 and 2 of Block 185, Carneys Point Township, Salem County, to a depth of approximately 200 feet. The NJPDES-DGW Permit No. NJ0083429 lists the compounds for which the constituent standards are suspended for the duration of the permit.

Portions of the Chambers Works Complex are currently under operations. The groundwater in these areas is monitored under the NJPDES-DGW Permit NJ0105872 that expires on January 31, 2008. This permit was issued by the Bureau of Non-Point Pollution Control (BNPC) for the following areas:

- Secure C Landfill (Areas 2, 3, 4, and 5A)
- Secure C Landfill (Proposed Areas 5B, 5C, 6, and 7)
- Landfill A and B (Solid Waste Landfill Facility Number 1713B)

The NJPDES-DGW Permits (Nos. NJ0083429 and NJ0105872) require submission of a semi-annual summary report for the reporting period to NJDEP on April and October of each year.

NJPDES-Discharge to Surface Water Permit

DuPont presently discharges approximately 30 million gallons of treated wastewater to the Delaware Estuary in accordance with NJPDES-Discharge to Surface Water (DSW) Permit No. NJ0005100. The wastewater comes from industrial production operations at the site, wastewater trucked to the site from other industrial sites, leachate collected from the landfills, and IWS water. All stormwater at the Chambers Works Complex is managed in accordance with the NJPDES-DSW Permit NJ0005100 and the Stormwater Pollution Prevention Plan. The majority of the stormwater for the active portions of the site drains through the B- Basin and discharges through Outfall 001 after commingling with the wastewater treatment effluent. Stormwater in Carneys Point drains into Henby Creek and out to the Delaware River through the sluice gate. These areas have no active manufacturing operations except for the Secure C Landfill. Stormwater from the active portions of the Secure C Landfill is collected and sent to the wastewater treatment facility for treatment.

Water Allocation Permit

Water for industrial cooling, fire protection, pollution control, and public non-community supply may be diverted under the NJDEP Water Allocation Permit, Program Interest ID: 2122P, Permit Number WAP040001. This permit expires on April 31, 2012.

NJDEP Title V Operating Permit

This permit allows the complex to operate the equipment and air pollution control devices specified in the NJDEP Title V Operating Permit, Program Interest ID: 65491, Permit Activity No. BOP060012 and to emit up to a level specified for each source operation as defined in the permit. The current permit expires December 21, 2010.

Other Environmental Permits

The following is a list of environmental permits issued to the site but not described above:

Description	Environmental Media	Permit No.	Expiration Date
Chemical Waste Storage and Treatment Area	RCRA	1708C1HP04	July 17, 2008
Water Treatment Plant	SDWA	1708300 (WIT4)	
Environmental, Health, and Safety Facility	TCPA	5086	as needed
Hazardous Waste Hauler's License	NJDEP	506207	30-Jun-07

Basin Closure Monitoring Program Analyte List			
Priority Pollutant Volatile Organics	**Priority Pollutant Semivolatile Organics**		**Additional Parameters**
Benzene	***Base Neutral Extractable***	Di-n-octyl phthalate	Aniline
Bromodichloromethane	Acenaphthylene	Fluoranthene	4-Chloroaniline
Bromoform	Acenaphthene	Fluorene	o-Toluidine
Bromomethane	Anthracene	Hexachlorobenzene	Trichlorofluoromethane
Carbon tetrachloride	Benzidine	Hexachlorobutadiene	Xylene
Chlorobenzene	Benzo(a) anthracene	Hexachlorocyclopentadiene	Dissolved lead
Chloroethane	Benzo(b) fluoranthene	Hexachloroethane	
Chloroform	Benzo(k) fluoranthene	Indeno(1,2,3-c,d)pyrene	
Chloromethane	Benzo(ghi) perylene	Isophorone	
Dibromochloromethane	Benzo(a) pyrene	Naphthalene	
1,1-Dichloroethane	bis(2-Chloroethoxy) methane	Nitrobenzene	**Priority Pollutant Total Metals:**
1,2-Dichloroethane	bis(2-Chloroethyl) ether	Nitrosodimethylamine	Aluminum
1,1-Dichloroethene	bis(2-Chloroisopropyl) ether	N-Nitroso-diphenyl amine	Arsenic
trans-1,2-Dichloroethene	bis(2-Ethylhexyl) phthalate	N-Nitroso-di-n-propylamine	Beryllium
1,2-Dichloropropane	4-Bromophenyl phenyl ether	Phenanthrene	Cadmium
cis-1,3-Dichloropropene	Butyl benzyl phthalate	Pyrene	Iron
trans-1,3-Dichloropropene	2-Chloronaphthalene	1,2,4-Trichlorobenzene	Lead
Ethylbenzene	4-Chlorophenyl phenyl ether	***Acid Extractable(1)***	Nickel
Methylene chlroide	Chrysene	4-chloro-3-methylphenol	Sodium
1,1,2,2-Tetrachloroethane	Di-n-butylphthalate	2-Chlorophenol	
Tetrachloroethene	Dibenzo (a,h) anthracene	2,4-Dichlorophenol	
Toluene	1,2-Dichlorobenzene	2,4-Dimethylphenol	
1,1,1-Trichloroethane	1,3-Dichlorobenzene	4,6-Dinitro-2-methylphenol	
1,1,2-Trichloroethane	1,4-Dichlorobenzene	2,4-Dinitrophenol	
Trichloroethylene	3,3-Dichlorobenzidine	2-Nitrophenol	
Vinyl chloride	Diethyl phthalate	4-Nitrophenol	
	Dimethyl phthalate	Phenol	
	1,2-Diphenylhydrazine	Pentachlorophenol	
	2,4-Dinitrotoluene	2,4,6-Trichlorophenol	
	2,6-Dinitrotoluene		
IND1 Analyte List			
Indicator Parameters	**Field Parameters**		
TOC	Temperature	Dissolved oxygen	
TOX	Specific conductivity	Eh	
	pH		

NOTE (1): Acid extractable semi-volatile organics sampling only required in well K13-M02B

Note : Borings were completed to depths of 10 feet bgs, however not all macrocores had full recovery
The depth of the boring was considered to be the bottom interval logged in the macrocore.
Some of the laboratory samples were qualified.However, qualifiers were not incorporated into this spreadsheet due to use of formulae for regression analyses.

Tan	XRF reading on native clay material
Light turquoise	XRF reading exceeds 600 ppm lead (NJNRDCSCC)
Bright green	XRF reading exceeds 400 ppm lead (NJRDCSCC), and is less than 600 ppm.

TABLE CP-2A
Soil Analytical Results - VOCs/SVOCs/PCBs/Pest/Herb
NJDEP Impact to Groundwater Soil Cleanup Criteria
Carneys Point Focus Area
Preliminary Assessment Report
DuPont Chambers Works
Deepwater, New Jersey
