TABLE WP-1A
Summary of Chemicals Used in Building 788
White Products Focus Area
Preliminary Assessment Report
DuPont Chambers Works
Deepwater, New Jersey

Building Number	Building Name	ProcessDat	Process D_1	ChemicalNa	CASNO	ProductLin	UseCode	Chemical St	WasteStrea	PhysicalSt
788		1951		2, 6-DI-T-Butyl-4-Methyphenol	128370	Specialty Chem East	R		WWTP	L
788	White Products "A"		1966	2,2'-AzoBis(2-Amidinopropane) Dihydrochloride	2997924	Zepel K Crude	R			
788	White Products A		1962	2,2'-Azobisisobutyramidine Dihydrochloride	2997924	Zepel Extender Polymer B	R			
788	White Products A		1962	2,2'-Azobisisobutyramidine Dihydrochloride	2997924	Zepel Extender Polymer D	R			
788		1965		2,6-Di-t-butyl-4-methyl phenol Antioxidant 29	128370	Specialty Chemicals East			WWTP	S
788	White Products	1969	1979	20% Carbon Black Dispersion (in Ethyleneglycol)	7333864	Kingston Black, Brevard Black	P	D	Incinerator	L
788	Performance Products "A"		1987	2-Amino-4-chloro-6-Methoxy-pyrimidine	5734645	Herbicide Intermediate	P		1988	Water
788	Building "A"		1980	2-Butoxyethanol+H2O	111762	Textile SFX-367 Finish	W		1983	Water
788	Performance Products A		1993	2-Dimethylaminoethyl Methacrylate	2867472		R			Mazar Mapeg 600MS before each batch
788	Specialty Chem Building "A"		1971	2-Ethyl Hexyl Methacrylate	688846		R			
788	Performance Chemicals A		1993	2-Ethylhexyl Acrylate	868779	Textile Fibers				Water after each charge
788				2-Ethylhexyl Methacrylate	68846	Zepel	R			
788	White Products A		1962	2-Ethylhexyl Methacrylate	688846	Zepel Extender Polymer B	R			
788	White Products A		1962	2-Ethylhexyl Methacrylate	688846	Zepel Extender Polymer D	R			
788		1964		2-Ethylhexyl Methacrylate	688846	Zepel	I	D	Ditch, WWTP	L
788	White Products A	2000	2000	2-Ethylhexyl Methacrylate	688846	Zelan HB200	R	D		L
788	Building "A"		2002	2-Ethylhexylmethacrylate	668846		R			
788	Building "A"	1975		2-Hydroxyethyl Methacrylate	868779		R	D		L
788				2-Hydroxyethyl Methacrylate	868779	Zepel	R			
788	White Products "A"		1966	2-Hydroxyethyl Methacrylate	868779	Zepel K Crude	R			
788		1988		3-Chloro-2-hydroxypropyl-methacrylate		Specialty Chemicals		D	Ditch	L
788	White Products A	1960		Acetic Acid	64197	Zelan S Crude	R	D		L
788	White Products A		1997	Acetic Acid	64197	Zonyl 8868	R		2006	
788	Building "A"			Acetic Acid	64197		R	D		L
788	White Products A	2000	2000	Acetic Acid	64197	Zelan HB200	R	D		L
788	White Products A		1962	Acetic Acid	64197	Zepel Extender Polymer B	R			
788	White Products A		1962	Acetic Acid	64197	Zepel Extender Polymer D	R			
788	Building "A"		1984	Acetic Acid	64197		R			
788				Acetic Acid	64197	Zepel				
788	White Products "A"		1966	Acetic Acid	64197	Zepel K Crude	R			
788	A		2003	Acetic Acid	64197		R			
788	Specialty Chem Building "A"		1990	Acetic Acid, Glacial	64167		R			
788	White Products A	1960	2002	Acetic Acid, Glacial	64197	Zelan S	R	D		L
788	White Products A		1996	Acetic Acid, Glacial	64197	Zonyl 8740	R		2006	
788	Performance Products A		1993	Acetic Acid, Glacial	64197		R			Mazar Mapeg 600MS before each batch
788	Building "A"		1965	Acetic Acid, Glacial			R			
788	White Products Building "A"		1979	Acetoacetic Ester	141979	Performance Chemicals	R		1996	
788	A	1977	1998	Acetone	67641	Wash Telomer Set	C	TT,D	Incineration or Recovered	L
788	White Products A		1962	Acetone	67641	Zepel Extender Polymer B	R			
788	White Products A		1962	Acetone	67641	Zepel Extender Polymer D	R			
788	White Products Building "A"		1959	Acetyl Acetone	123546	Performance Chemicals	R	1970s		
788	White Products Building "A"		1959	Acetyl Acetone	123546	Performance Chemicals	R		1980	
788	Performance Products A		1993	Acrylic Acid	79107		R			Mazar Mapeg 600MS before each batch
788	Building "A"		1965	Aerotex Accelerator VTX			R			
788	White PDTS "A"	1984	1987	Agent 384 (MPD 5737D)		Nylon Carpet - Antistain	P, W	D		
788	Perf BDTS "A"	1985	2004	Alfol-10 (n-Decylalcohol)	112301	Blend, only no chemical reaction		D	Absorbs Spills/solid then drum	L
788	Perf BDTS "A"	1985	2004	Alkanol 6112		Wetting Agent for Textiles	P	D, TT	Absorbs Spills then drum	L
788	White Products Building "A"		1959	Alkanol DOA (Mixed Alkyl Methacrylate Copolymer & Styrene in Kerosene*		Performance Chemicals	R	1970s		
788	White Products "A"		1960	Alkanol XC		Color Film Product Wetting Agent	P		1961	
788	Building "A"		1980	AMR (Acrylic Modified Resin) Distillate, Stripped		Textile SFX-367 Finish	P		1983	Water
788	White Products A		1996	Aqueous Distillate		Zonyl 8740	W		2006	
788	White PDTS "A"	1984	1986	Aqueous Layer		Nylon Carpet - Antistain	C, W		to WWTP	L
788	A		2003	Armeen DM-12D	112185		R			
788	Building "A"		2005	Armeen DM18	44740		C			Once per campaign
788	White Products "A"		1966	Armeen DM18D	124287	Zepel K Crude	R			
788	White Products A	2000	2000	Armeen DM-18D	124287	Zelan HB200	R	D		L
788	White Products A		1962	Armeen DM-18D	124287	Zepel Extender Polymer D	R			
788	White Products A		1962	Armeen DM-18D	124287	Zepel Extender Polymer B	R			
788	Building "A"		2002	Armeen DM-18D	9004993		R			
788				Armeen DM-18D	Mix	Zepel	R			
788	White Products "A"		1996	Arquad 12-37W	1120005	Zonyl 551	R		1996	
788	Building "A"		2002	Arquad 1250	112005		C			Once per campaign
788	White Products A		1996	Arquad 12-50	112005	Zonyl 8740	R		2006	
788	White Products A		1996	Arquad 12-50	67630	Zonyl 8740	R		2006	
788	White Products A	1960		Arquad18-50	112038	Zelan S Crude	R/W	D		S
788	White Products A	1960		Arquad18-50	36670	Zelan S Crude	R/W	D		S
788	Specialty Chem Building "A"		1980	Avitex ML			P			
788	Building "A"		1999	AvitexR			R			
788	White Products Building "A"			Azobisisobutyronitrile	78671	Methacrol 2138F	R	D		S
788	White Products "A"		1965	Benzene	71432	ZFM Crude	W

788	White PDTS "A"	1984	1986	Methy Iisobutyl ketone (MIBK)	10810	Nylon Carpet - Antistain	C, W	D	Incinerate	L
788		1991		Methyl Chloroform	71556	Performance products	R		Incinerator	L
788	White Products A		1996	Methyl Isobutyl Ketone	108101	Zonyl 8740	R,W		2006	
788	White Products A		1997	Methyl Isobutyl Ketone	108101	Zonyl 8868	R		2006	
788	White Products A		1997	Methyl Isobutyl Ketone Distillate	108101	Zonyl 8868	W		2006	
788		1990		Methyl Methacrylate	80626	Performance Chemicals	R			L
788	Building "A"	1970		Methyl Methacrylate	80626	Performance products			Ditch	L
788	Building "A"		1967	Methyl Methacrylate	80626		I			
788	White Products "A"		1965	Methyl Methacrylate	80626	ZFM Crude	R			
788	Building "A"		1999	Methylisobutyl Ketone	108101		C			
788		1983		Methylisobutylketone	108101	Specialty Chemicals	R	D	Ditch	L
788	A		2003	Methylmethacrylate Monomer	80626		R			
788	Performance Products A			Methylol Acrylamide	924425	Textile Fibers				Mazar MPG 600MS before each charge
788	Building "A"		2002	Methylol Acrylamide	924425		R			
788	Performance Products A			Methylol Acrylamide	924425		R			Mazar Mapeg 600MS before each charge
788	Performance Chemicals A		1993	Methylol Acrylamide	924425	Textile Fibers				Water after each charge
788		1965		Methymethacrylate	80626	Specialty Chemicals East			WWTP	L
788		1951		Methymethacrylate	80626	Specialty Chem East	R		WWTP	L
788		1981		MHFA-1		Specialty Chemicals East			WWTP	L
788	Building "A"		1967	Monomethyl Ether of Hydroquimone	150765		I			
788	White Products "A"		1985	MPD 6063		Zonyl 6297	I		2006	
788	Building "A"		1989	MPD 7040 Crude			R			
788	White Products A		1994	MPD 7040 Crude		Zonyl 8503	I		1995	
788	White Products A		1996	MPD 7040 Crude		Zonyl 8975	I		1997	
788	White Products A		1991	MPD 8070 Crude		Zonyl 8070	I		2006	
788	White Products A		1986	MPD-6700 Crude		Zonyl 6700	I			
788	White Products A		1987	MPD-6700 Crude		Zonyl 6991	I			
788	White Products A		1987	MPD-7040 Crude		Zonyl 7040	I			
788	White Products "A"		1996	Mykon NRW-3	61792312	Zonyl 551	R		1996	
788		1990		n,n-Dimethylaminoethanol	108010	Performance Chemicals	R			L
788	Specialty Chem Building "A"		1980	Nalan ES			P			
788	Specialty Chem Building "A"		1990	Nalan GN			P			
788	White Products A		1987	Nalan GN		Zonyl 6991	R			
788	White Products "A"		1996	Nalan GN		Zonyl 551	I		1996	
788	White Products A	1960	2002	Nalan GN		Zelan S	P	D		L
788	Specialty Chem Building "A"		1971	Nalan NWR			P			
788	Specialty Chem Building "A"		1964	Nalan W			P			
788	White Products "A"		1974	Nalan W		Zelec VPN	R		1986	
788	Building "A"		1980	n-Butanol+H2O	71633	Textile SFX-367 Finish	W		1983	Water
788	White Products A	2000	2000	n-Butyl Methacrylate	97881	Zelan HB200	R	D		L
788	Building "A"		1967	n-Decyl Alcohol	112301		I			
788	White Products Building "A"			n-Decyl Methacrylate	3179473	Methacrol 2138F	R	D		L
788	Building "A"		1967	n-Decyl Methacrylate Crude	3179473		P			
788	Building "A"		1984	Neoprene Latex 400	25067952		R			
788	Performance Products A		1984	Neoprene Latex TLF-6107	25322683	Textile Fibers	R		1991	Water after each charge
788	Performance Products	1978		Nickel Chloride	7718549	Catalysts	R	D	WWTP	S
788		1951		Nitrobenzene	98953	Specialty Chem East	R		WWTP	L
788		1965		Nitrobenzene	98953	Specialty Chemicals East			WWTP	L
788	White Products "A"		1965	Nitrobenzene	98953	ZFM Crude	R			
788	Building "A"		1967	Nitrobenzene	98953		I			
788	Performance Chemicals		2002	n-Methyl Pyrrolidone	872504	Performance Products	I		2005	
788	White Products A	2001	2002	n-Methylol Acrylamide	924425	Zelan HB101	R	D		L
788	White Products A	2000	2000	n-Methylol Acrylamide	924425	Zelan HB200	R	D		L
788	Building "A"		1999	n-Methylol Acrylamide	924425		R			
788	Specialty Chem Building "A"		1971	n-Methylol Acrylamide Solution	924425		R			
788	White Products A		1962	n-Methylolacrylamide	924425	Zepel Extender Polymer B	R			
788	White Products "A"		1966	n-Methylolacrylamide	924425	Zepel K Crude	R			
788	White Products A		1962	n-Methylolacrylamide	924425	Zepel Extender Polymer D	R			
788	Building "A"	1975		n-Methylolacrylamide	924425		R	D		L
788	White Products A		1972	n-Methylolacrylamide	924425	Zepel 2373 Crude	R			
788				n-Methylolacylamide	92446	Zepel	R			
788	Building "A"			NRD 342			R		1991	
788	Specialty Chem Building "A"		1971	Octadecyldimethylamine (Armeen DM18D)	124287		R

TABLE WP-1A
Summary of Chemicals Used in Building 888
White Products Focus Area
Preliminary Assessment Report
DuPont Chambers Works
Deepwater, New Jersey

Building Number	Building Name	Process Date	ChemicalName	CASNO	ProductLine	Use Code	WasteStreamDisposalMethod	PhysicalState
888	D	2002	Aqueous Waste Stream		Tyzor AA-95	W	WWTP	L
888	D	2002	Tyzor TPT	546689	Tyzor-95, Tyzor 105	R		L
888	D	2002	Acetyl Acetone	123546	Tyzor-95, Tyzor 106	R		L
888	D	2002	Isopropyl Alcohol (IPA)	67630	Tyzor-95, Tyzor 107	R		L
888	D	2002	AA-TPT	17927729	Tyzor-95, Tyzor 108	P		L
888	D	2002	Aqueous Waste Stream		Tyzor-95, Tyzor 109	W	WWTP	L
888	D	2002	Isopropyl Alcohol (IPA)	67630	Tyzor-95, Tyzor 110	C,W	Incineration	L
888	Perf PDTS "B"	1992	Agent 447C		Antistatic Agent for Nomex	P	Product-water to WWTP	L
888	Perf PDTS "B"	1992	Agent 447C		Antistatic Agent for Nomex	P	Product-water to WWTP	L
888	Perf PDTS "B"	1992	Agent 447C		Antistatic Agent for Nomex	P	Product-water to WWTP	L
888	Perf PDTS "B"		n-Octylalcohol		Antistatic Agent for Nomex	R		L
888	D	2002	Tyzor TnBT	5593704	Tyzor AA-95	R		L
888	D	2002	Acetyl Acetone	123546	Tyzor AA-95	R		L
888	D	2002	AA-TnBT	16902593	Tyzor AA-95	P		L
888	D	2002	n-Butyl Acohol-Isopropyl Alcohol	71363, 67630	Tyzor AA-95	W	Incineration	L
888	D	2002	Isopropyl Alcohol (IPA)	67630	Tyzor AA-95	R,C		L
888	Perf PDTS "B"		Phosphoric Anhydride	1314563	Antistatic Agent for Nomex	R		L
888	Perf PDTS "B"		Potassium Hydroxide	1310583	Antistatic Agent for Nomex	R		L
888	Perf PDTS "B"		Phosphorous Acid	13598362		R		L
888	Perf PDTS "B"		Water			C	to WWTP	L
888	Perf PDTS "D"	1985	Agent 1045-1-1		Personal Care Products	P		S
888	Perf PDTS "D"	1985	Stepan Agent 1034-1		Personal Care Products	R		S
888	Perf PDTS "D"	1985	Peg-200-Monooleate		Personal Care Products	R		L
888	Perf PDTS "D"	2005	TBM Mixed Alcohol		Mixed Alcohols	P, C	Incineration	L
888	Perf PDTS "D"	1997	Alkanol MP		Antistatic	P	to WWTP	L
888	Perf PDTS "D"	1997	n-Propyl alcohol	71238	Antistatic	R	to WWTP	L
888	Perf PDTS "D"	1997	Phosphoric Anhydride	1314563	Antistatic	R	to WWTP	S
888	Perf PDTS "D"	1997	Aqua Potassium Hydroxide	1310583	Antistatic	R	to WWTP	S
888	Perf PDTS "D"	1996	Alkanol SB		Automotive engine cleaning agent	P	to WWTP	L
888	Perf PDTS "D"	1996	Solvent Neutral Oil 70	64741895	Blended material no chemical reaction		to WWTP	L
888	Perf PDTS "D"	1996	Olilpurple M Liquid		Blended material no chemical reaction		to WWTP	L
888	Perf PDTS "D"	1996	Fuel Oil Additive No 2		Blended material no chemical reaction		to WWTP	L
888	Perf PDTS "D"	1996	Conosol C-200	64742478	Blended material no chemical reaction		to WWTP	L
888	Perf PDTS "D"	1996	Antioxidant 31		Blended material no chemical reaction		to WWTP	
888	Perf PDTS "D"	1996	DCI 6A		Blended material no chemical reaction		to WWTP	L
888		1992	Dimethyl sulfate	77781	Performance Products	R		
888			2-Ethylhexyl Amine	104756	Petroleum Additives	I	Ditch, WWTP	L
888		1956	n-(3-Dimethylaminopropyl) Oleamide	109284	Specialty Chemicals	I	Ditch, WWTP	L
888		1956	Oleic Acid	112801	Specialty Chemicals	R	Ditch, WWTP	L
888		1956	3-Dimethylamino Propylamine	109557	Specialty Chemicals	R	Ditch, WWTP	L
888	White Products	1959	Toluene	108883	Multifunctional Fuel Additives	R		L
888		1959	Tridecyl Alcohol	68526863	Multifunctional Fuel Additives	R		L
888	White Products	1959	Phorphoric Anhydride	131453	Multifunctional Fuel Additives	R		S
888	White Products	1959	2-Ethylhexylamine	104756	Multifunctional Fuel Additives	R		L
888	White Products	1959	DMA-4, 4A,4A1, 4W		Multifunctional Fuel Additives	P	59-'76 -Ditch; after '76 -WWTP	L
888	White Products	1959	Methanol	67561	Multifunctional Fuel Additives	R		L
888	White Products	1959	Kerosene	8008206	Multifunctional Fuel Additives	R		L
888	White Products		Dimethyl-5 Sulfoisophtalates Sodium Salt			R		S
888	White Products		Hexamethylenediamine	124094		R		L
888	White Products	1991	5-Sulfoisophthalate, Sodium Salt	6362794		P		L
888	White Products	1991	Methanol	67561		W	WWTP	L
888	White Products	1992	Methanol	67561		I		L
888	Performance Chemicals	2001	Fluorocarbon Alcohol Phosphates	Mixture	Performance Products	P	Incinerated	S
888	Performance Chemicals	2001	Phosphoric Anhydride	1314563	Performance Products	R	Scrubbed with caustic	S
888	Performance Chemicals	2001	Fluorocarbon Alcohol	Mixture	Performance Products	R	Incinerated	L
888	Performance Chemicals	2001	Ammonium Hydroxide	1336216	Performance Products	R	Ditch	L
888	Performance Chemicals	2001	Isopropyl Alcohol	67630	Performance Products	I	Incinerated	L
888	Performance Chemicals	2001	Diethanolamine	111422	Performance Products	R	Incinerated	L
888	Performance Chemicals	2001	Ethylene Glycol	107211	Performance Products	I	Incinerated	L
888	Performance Chemicals	2001	Epsom Salt	10034998	Performance Products	I	Ditch	S
888	White Products Building "D"	1976	Methacrol Lubricant R		Methacrol Lubricant R	P	Ditch	S
888	White Products Building "D"		Petrolatum Fonoline	8009038	Methacrol Lubricant R	R		S
888	White Products Building "D"		Oil, Mineral No1225	8012951	Methacrol Lubricant R	R		L
888	White Products Building "D"		Avitex R		Methacrol Lubricant R	R		S
888	White Products Building "D"		Acetic Acid, Glacial	64197	Methacrol Lubricant R	R		L
888	White Products Building "D"		Octadecyldimethylamine	124284	Methacrol Lubricant R	R		L
888	White Products D	1983	Carbowax 1000	25322683	Zelcon 5126	R		S
888	White Products D	1983	Ethylene Glycol	107211	Zelcon 5126	R		L
888	White Products D	1983	Dimethyl Terephthalate	120616	Zelcon 5126	R		S
888	White Products D	1983	Irganox 1010	6683198	Zelcon 5126	R		S
888	White Products D	1983	Lithium Acetate Dihydrate	6108174	Zelcon 5126	R		S
888	White Products D	1983	Zinc Acetate Dihydrate	5970456	Zelcon 5126	R		S
888	White Products D	1983	Igepal CO-970	9016459	Zelcon 5126	R		S
888	White Products D	1983	Soda Ash	497198	Zelcon 5126	R		S
888	White Products D	1983	Ucarcide 225	111308	Zelcon 5126	R		L
888	White Products D	1983	Bisoft D-40		Zelcon 5126	R		L
888	White Products D	1983	Methyl Alcohol (by-product)	67561	Zelcon 5126	W	WWTP	L
888	White Products D	1983	Ethylene Glycol (by-product)	107211	Zelcon 5126	W	WWTP	L
888	White Products D	1983	Ethylene Glycol Wash	107211	Zelcon 5126	C	WWTP	L
888	White Products D	1983	Water Wash	7732285	Zelcon 5126	C	WWTP	L
888	White Products D	1983	Zelcon 5126		Zelcon 5126	P		L
888	White Products D	1983	Texatherm	6742650	Zelcon 5126	R		L
888	White Products D	1983	Pentaerythritol	115775	Zelcon 5126	R		S
888	White Products D	1986	Dimethyl Terephthalate	120616	Zelcon 6715	R		S
888	White Products D	1986	Carbowax 1450	25322683	Zelcon 6715	R		S
888	White Products D	1986	Ethylene Glycol	107211	Zelcon 6715	R		L
888	White Products D	1986	Diethylene Glycol	111466	Zelcon 6715	R		L
888	White Products D	1986	Maganese Acetate Tetrahydrate		Zelcon 6715	R		S
888	White Products D	1986	Zinc Acetate Dihydrate	5970456	Zelcon 6715	R		S
888	White Products D	1986	Lithium Acetate Dihydrate	6108174	Zelcon 6715	R		S
888	White Products D	1986	Antioxidant No. 29	128370	Zelcon 6715	R		S
888	White Products D	1986	Propylene Glycol	57556	Zelcon 6715	R		L
888	White Products D	1986	Distillate by-product	67561	Zelcon 6715	W	WWTP	L
888	White Products D	1986	Distillate by-product	107211	Zelcon 6715	W	WWTP	L
888	White Products D	1986	Ethylene Glycol Wash	107211	Zelcon 6715	C	WWTP	L
888	White Products D	1986	Water Wash	7732285	Zelcon 6715	C	WWTP	L
888	White Products D	1986	Zelcon 6715		Zelcon 6715	P		S

888	White Products D		Zelec DI		Zelec DI	P		Water when changing products
888	White Products D		Zelec DX		Zelec DP	I		
888	White Products D		Duponol LS Paste		Zelec DP	I		
888	White Products D		Terpene B Hydrocarbons		Zelec DP	R		
888	White Products D		Alcohol C-8	111875	Zelec DP	R		
888	White Products D		Isopropyl Alcohol	67630	Zelec DP	R		
888	White Products D		Zelec DP		Zelec DP	P		Water after each charge
888	White Products D		Diethylaminoethyl Methacrylate (DEAM)	105168	Zelec DX	R		
888	White Products D		Dimethyl Sulfate	77781	Zelec DX	R		
888	White Products D		Sodium Acetate Trihydrate	127093	Zelec DX	R		
888	White Products D		p-t-Butylcatechol	98293	Zelec DX	R		
888	White Products D		Ammonium Persulfate	7727540	Zelec DX	R		
888	White Products D		Sodium Dimethyldithio Carbamate	128041	Zelec DX	R		
888	White Products D		Hyflo Supercel		Zelec DX	W		
888	White Products D		Isopropyl Alcohol	67630	Zelec DX	R		
888	White Products D		Zelec DX		Zelec DX	P,I		Water after each charge
888	White Products D		n-Butyl Alcohol	71363	Zelec KC	R		
888	White Products D		Phosphoric Anhydride	1314563	Zelec KC	R		
888	White Products D		Potash Caustic Liquid, 45%	1310583	Zelec KC	R		
888	White Products D		Zelec KC	7732185	Zelec KC	P		Water after each charge
888	White Products D		Dimethyl Terephthalate	120616	Zelcon SBP	R	1991	
888	White Products D		MPEG 1000		Zelcon SBP	I	1991	
888	White Products D		Propylene Glycol	57556	Zelcon SBP	R	1991	
888	White Products D		Zinc Acetate Dihydrate	557346	Zelcon SBP	R	1991	
888	White Products D		Lithium Acetate Dihydrate	6108174	Zelcon SBP	R	1991	
888	White Products D		Antioxidant No. 29	128370	Zelcon SBP	R	1991	
888	White Products D		Distillate By-product	57561	Zelcon SBP	W	1991	
888	White Products D		Distillate By-product	57556	Zelcon SBP	W	1991	
888	White Products D		Zelcon SBP		Zelcon SBP	P	1991	Water
888	White Products D		Adol 330	143282	Zelec 3337	R		
888	White Products D		Adol 330	68155000	Zelec 3337	R		
888	White Products D		n-Octyl Alcohol	111875	Zelec NK	R		
888	White Products D		n-Decyl Alcohol	112301	Zelec NK	R		
888	White Products D		Alfol 1216	112538	Zelec NK	R		
888	White Products D		Alfol 1216	117721	Zelec NK	R		
888	White Products D		Alfol 1216	36653824	Zelec NK	R		
888	White Products D		Phosphoric Anhydride	1314563	Zelec NK	R		
888	White Products D		Diethanolamine	111422	Zelec NK	R		
888	White Products D		Zelec NK		Zelec NK	P		Water at end of each campaign
888	White Products D		Tridecyl Phosphate	4200559	Tridecyl Phosphate	P	1992	
888	White Products D		Tridecyl Alcohol	27458920	Tridecyl Phosphate	R	1992	
888	White Products D		Phosphoric Anhydride	1314563	Tridecyl Phosphate	R	1992	Water at end of each campaign
888	White Products D		n-Octyl Alcohol	111875	Zelec UN	R		
888	White Products D		n-Decyl Alcohol	112301	Zelec UN	R		
888	White Products D		Alfol 1216	112538	Zelec UN	R		
888	White Products D		Alfol 1216	117721	Zelec UN	R		
888	White Products D		Alfol 1216	36653824	Zelec UN	R		
888	White Products D		Phosphoric Anhydride	1314563	Zelec UN	R		
888	White Products D		Hydrogen Peroxide 35%	7722841	Zelec UN	R		

TABLE WP-1A
Summary of Chemicals Used in Building 888
White Products Focus Area
Preliminary Assessment Report
DuPont Chambers Works
Deepwater, New Jersey

Building Number	Building Name	Process Date	ChemicalName	CASNO	ProductLine	Use Code	WasteStreamDisposalMethod	PhysicalState

888	Building "D"	1983	Magnesium Sulfate Heptahydrate	7487889		R		S
888	Building "D"	1983	Diethanolamine	111422		R		L
888	Building "D"	1976	Zonyl FSJ	65530714, 65530725,	Zonyl Fluorosurfactants	P		L
888	Bulding "D"		DuPont Corrosion Inhibitor DI		Corrosion inhibitor for steel	P		
888	Bulding "D"		Merpol A			R		
888	Bulding "D"		Zelec UN			R		
888	Bulding "D"		DCI-11			R		
888	Bulding "D"		IPA Wash			C		after each campaign
888	Bulding "D"		Tyzor HPET distillate			C		
888	D		DuPont Valvemaster Concentrate		Gasoline Additive	P		

TABLE WP-1A
Summary of Chemicals Used in Building 888
White Products Focus Area
Preliminary Assessment Report
DuPont Chambers Works
Deepwater, New Jersey

Building Number	Building Name	Process Date	ChemicalName	CASNO	ProductLine	Use Code	WasteStreamDisposalMethod	PhysicalState
888	D		Tridecyl Alcohol	68526863		R		
888	D		Phosphoric Anhydride	1314563		R		
888	D		2-Ethylhexylamine	104756		R		
888	D		Kerosene	8008206		R		
888	Building "D"		TLF 9574	1071761	Oil well treating chemicals	P		
888	Building "D"		TLF 9574	5593704	Oil well treating chemicals	P		
888	Building "D"		Tyzor NBZ	1071761		R		
888	Building "D"		Tyzor NBZ	71363		R		
888	Building "D"		Tyzor TnBT	5593704		R		
888	Building "D"		Isopropanol Cleanout	67630		C		Once per campaign
888	Building "D"		n-Butanol by-product	71633		W		
888	Building "D"		Freon 113	76131		R	1993	
888	Building "D"		Zonyl RQ			P		
888	Building "D"		Telomer BL Alcohol			R		
888	Building "D"		Solvent Neutral Oil 70	64741895	Solvent	R		
888	Building "D"		Conosol C-200	64742478	Solvent	R		
888	Building "D"		Sodium Bromide			W		
888	Building "D"		Sulframin 1260 Slurry	2155300	Surfactant	R		
888	White Products		Texatherm	64741884	Heat Transfer Fluid		2000	
888	White Products		Texatherm	64742014	Heat Transfer Fluid		2000	
888	White Products		Ethylene Glycol	107211	DRL-6 Monomer	R	1966	
888	White Products		DRL-6	396557	DRL-6 Monomer	R	1966	
888	White Products		DRL-6 Monomer		DRL-6 Monomer	P	1966

888	White Products		5-Lithiosulfoisophthalic Acid	46728750	DRL-124	R	1998	
888	White Products		Ethylene Glycol	107211	DRL-124	R	1998	
888	White Products		Lithium Acetate Dihydrate	6108174	DRL-124	R	1998	
888	White Products		DRL-124	150099948	DRL-124	P	1998	
888	Performance Products	1990	Carbon Disulfide	75150		R		L
888	Specialty Chemicals D		TLF 6232		Oil Well Drillings	P	1984	
888	Specialty Chemicals D		TLF 6826		Proctor & Gamble	P	1987	IPA Wash Water
888	Specialty Chemicals D		TLF 7102		Proctor & Gamble	I	1987	
888	Specialty Chemicals D		TLF-7129		Shampoo		1987	Water
888	Performance Products D		TLF 7304*		Proctor & Gamble	P	1987	Water Wash
888	Performance Products D		TLF 7979		Textile Fibers			Isopropyl Alcohol After each charge
888	Performance Products D		Telomer BL Alcohol, Dry	68391082				Isopropyl Alcohol After each charge
888	Performance Products D		Phosphoric Anhydride	1314563				Isopropyl Alcohol After each charge
888	Performance Products D		Diethanolamine	111422				Isopropyl Alcohol After each charge
888	Performance Products D		Isopropyl Alcohol	67630				Isopropyl Alcohol After each charge
888	Specialty Chemicals D		TLF 6171	5593704	Glass Industry	P	1992	Water Wash
888	Performance Products D		TLF 7129		Carpet Shampoo	I		Water & IPA after campaign
888	Performance Products D		TLF-7152		Proctor & Gamble	P	1987	Water after each charge
888	Performace Products		TLF 2333 Crude	3991739	Surfactant	I		Water
888	White Products D		TLF 2370-B		Catalyst for use in Elastomer area	P		Water
888	Building "D"		Dibenzylethanolamine Acetate	19520888	Dylux	P	1992	
888	Building "D"		Dibutyldithiocarbamate			P		
888	Building "D"		Dibutylamine	111922		I		
888	Building "D"		Soda Caustic Liquid 30%	1310732		I		
888	Building "D"		Carbon Disulfide	75150		I		
888	Building "D"		Tepidone/Tepidone N			P	1992	
888	Building "D"		Dibutyldithiocarbamate			I	1992	
888	Building "D"		Oleic Acid	112801		R	1992	
888	White Products C		TLF 2904			P	1975	Water
888	White Products D		TLF 3303		Treatment for oil wells	P		Water
888	Performance Products D		TLF 4135		Zepel	I		Water after each charge
888	White Products D		TLF 4583D		Zepel	I		Water
888	White Products D		TLF 4188		Avitex	P	1975	Water after each charge
888	White Products D		TLF 5934		Textile Fibers Dept			Water after each charge
888	Building "D"		Ammonium Chloride Solution	12125029	Tyzor TPT	P	2002	Water
888	Building "D"		Amoco X Fluid M		Gasoline Additive	P		Isopropyl Alcohol
888	Building "D"		Formulation of Xylene	1330207	Gasoline Additive	R		Isopropyl Alcohol
888	Building "D"		n,n'-Disalicylidene-1,2 Propanediamine	94917	Gasoline Additive	R		Isopropyl Alcohol
888	Building "D"		Ethylbenzene	100414	Gasoline Additive	R		Isopropyl Alcohol
888	Building "D"		n,n'-Di-sec-butyl-p-phenylenediamine	101962	Gasoline Additive	R		Isopropyl Alcohol
888	Building "D"		n,n'-Di-sec-butyl-p-phenylenediamine	101962	Gasoline Additive	R		Isopropyl Alcohol
888	Building "D"		2,6-Di-tert-butylphenol	128392	Gasoline Additive	R		Isopropyl Alcohol
888	Building "D"		Isopropyl Alcohol	67630	Gasoline Additive	R		Isopropyl Alcohol
888	White Products "D"		n,n'-Disalicylidene-1,2-propanediamine	94917	No Reaction		1982	
888	Building "D"		Antioxidant 33		Gasoline Additive	P	1976	
888	Building "D"		Xylene	see earlier	No Reaction	R	1976	
888	White Products "D"		Zonyl NF	65530634	Zonyl 901	I	2006	
888	White Products "D"		Zonyl NF	65530645	Zonyl 901	I	2006	
888	White Products "D"		Zonyl NF	65530747	Zonyl 901	I	2006	
888	White Products "D"		Zonyl 901	65530634	Zonyl 901	P	2006	Water after every charge
888	White Products "D"		Zonyl 901	65530645	Zonyl 901	P	2006	Water after every charge
888	White Products "D"		Zonyl 901	65530747	Zonyl 901	P	2006	Water after every charge
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006	
888	White Products Building "D"		Acetyl Acetone	123546	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	After every charge
888	White Products Building "D"		Tyzor AA-95	(see below)	Performance Chemicals		2006	
888	White Products Building "D"		Titanium Acetyl Acetone Complexes*	97281099	Performance Chemicals	P	2006	
888	White Products Building "D"		n-Butyl Alcohol*	71363	Performance Chemicals	P	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor TPT	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006	
888	White Products Building "D"		n-Butyl Alcohol	71363	Performance Chemicals	R	2006	
888	White Products Building "D"		Acetyl Acetone	123546	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	After ever charge
888	White Products Building "D"		Tyzor AA-105	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Titanium, Acetyl Acetone, Ethyl Alcohol, Isopropyl Alcohol Complexes*	445398765	Performance Chemicals	P	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	P	2006	
888	White Products Building "D"		Ethyl Alcohol*	64175	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor TPT	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006	

TABLE WP-1A
Summary of Chemicals Used in Building 888
White Products Focus Area
Preliminary Assessment Report
DuPont Chambers Works
Deepwater, New Jersey

Building Number	Building Name	Process Date	ChemicalName	CASNO	ProductLine	Use Code	WasteStreamDisposalMethod	PhysicalState
888	White Products Building "D"		Tyzor ET	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraethyl Titanate*	3087363	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		Ethyl Alcohol*	64175	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006	
888	White Products Building "D"		Acetyl Acetone	123546	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	After every charge
888	White Products Building "D"		Tyzor AA	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Titanium Acetyl Acetonate*	17927729	Performance Chemicals	P	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor TPT	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006	
888	White Products Building "D"		Acetyl Acetone	123546	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	After every campaign
888	White Products Building "D"		Tyzor Blend 80/20	(see below)	Performance Chemicals	P	2003	
888	White Products Building "D"		Tyzor TBT	(see below)	Performance Chemicals	R	2003	
888	White Products Building "D"		Tetrabutyl Titanate*	5593704	Performance Chemicals	R	2003	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2003	
888	White Products Building "D"		n-Butyl Alcohol*	75650	Performance Chemicals	R	2003	
888	White Products Building "D"		Tyzor TPT	(see below)	Performance Chemicals	R	2003	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2003	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2003	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2003	Beginning of every charge
888	White Products Building "D"		Tyzor BTM	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor 80P	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor TPT*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		Tyzor TBT*	5593704	Performance Chemicals	R	2006	
888	White Products Building "D"		Tyzor NPT*	3087374	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	After every charge
888	White Products Building "D"		Tyzor 131	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Sodium Chloride*	7647145	Performance Chemicals	P	2006	
888	White Products Building "D"		Titanium Lactate Sorbitol*		Performance Chemicals	P	2006	
888	White Products Building "D"		Water*	7732185	Performance Chemicals	P	2006	
888	White Products Building "D"		Water	7732185	Performance Chemicals	C	2006	After every charge
888	White Products Building "D"		Lactic Acid	50215	Performance Chemicals	R	2006	
888	White Products Building "D"		Sorbitol	50704	Performance Chemicals	R	2006	
888	White Products Building "D"		Sodium Hydroxide	1310732	Performance Chemicals	R	2006	
888	White Products Building "D"		Titanium Tetrachloride	7550450	Performance Chemicals	R	2006	
888	White Products Building "D"		Tyzor 212	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Alkanolamine Chelate of Zirconium Alkoxide*		Performance Chemicals	P	2006	
888	White Products Building "D"		n-Propanol*	71238	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor NPZ	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetra-n-propyl Zirconate*	23519779	Performance Chemicals	R	2006	
888	White Products Building "D"		n-Propanol*	71238	Performance Chemicals	R	2006	
888	White Products Building "D"		n,n,n'-Tris(2-Hydroxypropyl)-n'-(2-Hydroxyethyl) Ethylenediamine	139902	Performance Chemicals	R	2006	
888	White Products Building "D"		2-Propanol	67630	Performance Chemicals	C	2006	After every campaign
888	White Products Building "D"		Tyzor 217	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Sodium Zirconium Lactate*	174206156	Performance Chemicals	P	2006	
888	White Products Building "D"		Sodium Chloride*	7647145	Performance Chemicals	P	2006	
888	White Products Building "D"		Water*	7732185	Performance Chemicals	P	2006	
888	White Products Building "D"		Zirconium Oxychloride, Octahydrate	13520928	Performance Chemicals	R	2006	
888	White Products Building "D"		Lactic Acid	50215	Performance Chemicals	R	2006	
888	White Products Building "D"		Sodium Hydroxide	1310732	Performance Chemicals	R	2006	
888	White Products Building "D"		Water	7732185	Performance Chemicals	R,C	2006	After every charge
888	White Products Building "D"		Tyzor 218	(see below)	Performance Chemicals	P	1995	
888	White Products Building "D"		Sodium Zirconium Glycolate*		Performance Chemicals	P	1995	
888	White Products Building "D"		Sodium Chloride*	7647145	Performance Chemicals	P	1995	
888	White Products Building "D"		Water*	7732185	Performance Chemicals	P	1995	
888	White Products Building "D"		Zirconium Oxychloride, Octahydrate	13520928	Performance Chemicals	R	1995	
888	White Products Building "D"		Glycolic Acid	79141	Performance Chemicals	R	1995	
888	White Products Building "D"		Sodium Hydroxide	1310732	Performance Chemicals	R	1995	
888	White Products Building "D"		Water	7732185	Performance Chemicals	R,C	1995	After every campaign
888	White Products Building "D"		Tyzor 9000	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		t-Butyl Titanate*	3081396	Performance Chemicals	P	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	P	2006	
888	White Products Building "D"		t-Butyl Alcohol*	75650	Performance Chemicals	P	2006	
888	White Products Building "D"		2-Propanol*	67630	Performance Chemicals	P	2006	
888	White Products Building "D"		t-Butyl Alcohol	75650	Performance Chemicals	R	2006	
888	White Products Building "D"		Tyzor TPT	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006

888	White Products Building "D"		Tyzor TnBT	(see below)	Performance Chemicals	R	2006	

TABLE WP-1A
Summary of Chemicals Used in Building 888
White Products Focus Area
Preliminary Assessment Report
DuPont Chambers Works
Deepwater, New Jersey

Building Number	Building Name	Process Date	ChemicalName	CASNO	ProductLine	Use Code	WasteStreamDisposalMethod	PhysicalState
888	White Products Building "D"		Tetrabutyl Titanate*	5593704	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		n-Butyl Alcohol*	71363	Performance Chemicals	R	2006	
888	White Products Building "D"		n-Butyl Alcohol	71363	Performance Chemicals	R	2006	
888	White Products Building "D"		n-Butyl Alcohol Recovered	71363	Performance Chemicals	I	2006	
888	White Products Building "D"		Isopropyl Alcohol Recovered	67630	Performance Chemicals	I	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	After every charge
888	White Products Building "D"		Tyzor BTP	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Titanium Tetrabutanolate Polymer*	9022962	Performance Chemicals	P	2006	
888	White Products Building "D"		n-Butyl Alcohol*	71363	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor TnBT	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetrabutyl Titanate*	5593704	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		n-Butyl Alcohol*	71363	Performance Chemicals	R	2006	
888	White Products Building "D"		Water, Deionized	7732185	Performance Chemicals	R	2006	
888	White Products Building "D"		n-Butyl Alcohol	71363	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	Beginning of every charge
888	White Products Building "D"		Tyzor CLA	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Titanium Acetyl Acetone Isopropyl Alcoholtriethanolmine Complexes*	85631556	Performance Chemicals	P	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor TE	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Titanium, Bis[2-[Bis(2-Hydroxyethyl) Amino-kappa-n]Ethanolato-kappa-o]Bis(2-propanolato)*	36673162	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006	
888	White Products Building "D"		Tyzor AA	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Titanium, Diisopropoxy)Bis-[2,4-Pentanedianato]*	17927729	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	After every charge
888	White Products Building "D"		Tyzor DC	(see below)	Performance Chemicals	P	2006	
888	White Products Building "D"		Titanium, Bis (Ethylacetoacetato)-Diisopropoxy*	27858328	Performance Chemicals	P	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	P	2006	
888	White Products Building "D"		Tyzor TPT	(see below)	Performance Chemicals	R	2006	
888	White Products Building "D"		Tetraisopropyl Titanate*	546689	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol*	67630	Performance Chemicals	R	2006	
888	White Products Building "D"		Acetoacetic Ester	141979	Performance Chemicals	R	2006	
888	White Products Building "D"		Isopropyl Alcohol	67630	Performance Chemicals	C	2006	After every charge
888	White Products Building "D"		Isopropyl Alcohol, Recovered	67630	Performance Chemicals	I	2006	
888	LPA/White Products	1973	Tall Oil Fatty Acid	68152943	Multifunctional Fuel Additives	R		L

Additional Background Information

Currently, White Products Focus Area (FA) uses the following chemicals:

- Building 788 (“A”) building takes in: acetic acid glacial, acetone (99.5%), acrylic acid glacial, aerotex accelerator, Afilan 5007E, Alfol 10, Armeen DM-12-D, DM-14D, and 18D, Arquad 12-50, Arquad 18-50, Avitex 2153, Avitex R, Blemmer PE-350, caustic soda (25% dilution), dimethylaminoethylmethacrylate, DMF Tech, dodecyl mercaptan 98%, Dowanol PGDA, Duponol Waqe Ethoquad 18/25, n-methylolacrylamide (48% MAM), N,N- diethylethanolamine, ethylene glycol (99.9%), ethylene glycol dimethacrylate, 2-ethylhexyl methacrylate (98.5%), glycidyl methacrylate, hexylene glycol (99%), hydrophobol Xan, IPA anhydrous (99.7%), Jayflex 77, Kathon LX, Lauryl methacrylate (60%), MAFO 13, Mazar MAPEG 600 MS, MEHQ (MMHQ), Merpol HCS, methyl methacrylate, methyl isobutyl ketone (99.5%), MPD-6063, MPD-6700, MPD-7040, MPD-8070, TLF-8348, TLF – 8412, TLF-8669, Neoprene Latex 50%, Paracol 700N, PEG 600 Monostearate, potassium persulfate, propylene glycol, sodium DDB sulfonate, soda ash, sodium chloride (99.7%), sodium dodecylbenzenesulfonate (97%), stearyl acrylate (SR-257 monomer), steryl methacrylate (55%), sulfamic acid, sulfamic 1260 slurry, surfactant HCS, Surfactant OJS, tartaric acid, TBCU-A Bulk, Telomer B Citrate, Terigitol 15-5-20, TLF 1588-G, TLF-4029B, TLF 4135, TLF-6130, TLF-8195, TLF-8300, TFL-8315, TLF-8347, TLF-8774, TLF-9094, TLF-9094, TMDQ, tridecyl alcohol ethoxylated TD-5, triethanolamine 99%, Tween 80, MPD-6063, MPD-6700, MPD-7040, MPD-8070, Vazo 56WSP, Vazo 67, Vinylidene Chloride (VDC), wax paraffin 125-128, wax-paraffin 140-142, Zelan S Crude, Zepel Extender Polymer B, Zepel Extender Polymer D, Zepel Fluoromonomer Distilled, Zepel Fluoromonomer Distilled Washed, Zepel K Crude, ZFAN Distilled, Zonyl TA-N, Zonyl TM
- Building 788 Outputs: Alkanol 6112; DuPont Repellent 7700; Lodyne P-504, Lodyne P-514; Lodyne P-702; Nalan D; Nalan GN; Nalan W; PMMA-A; Teflon AP; TLF-9178; TFL-9221; TFL-9577; and Zonyl- Activator 100; B, D, G; NWA, NWG, PPR; RN; S-400, 2000, 6297, 6700,6991, 7040, 8070, 8195, 8300, 8315, 8412, 8483, 8514, 8740, 8774, 8846, 8868, 8975, 9155, 9200, 9223B.
- Building 149 (White Products “C” Building) and Building 152 (White Products “B” Building) have been demolished; but based on review of the process database, they produced similar compounds (Zelec®, liquid surfactants) to what is currently being produced in Building 788.

During the plant layout map review for 1917 – 1919, twelve buildings were identified in the White Products FA including: an office, soda plant, refrigerant plant, Bornidol plant, (a.k.a. Bornbol or Borneol), Acetyl, Camphene, Oxidation House, Fortifying House, Test Lab, Sulfuric Acid House, Packing House, and Store House. From 1939 to the present, twenty buildings or structures were identified (estimated square footage is shown where possible):

- Building 770 Ponsol Colors #2 – 58,020 square feet (sq. ft.)
- Building 787 Ponsol Refrigerant Building/Control Building – 1,014 sq. ft.
- Building 793 Ponsol Lab (Dyes FA) – 5,791 sq. ft.
- Building 798 Ponsol Change House (Dyes FA) – 6,304 sq. ft.
- Building 588 Finished Dye Storehouse/Printing & Stationery – 89,287 sq. ft.
- Building 149 White Products "C" – 14,267 sq. ft.
- Building 152 White Products "B" – 7,799 sq. ft.
- Building 788 White Products "A" – (square footage unknown)
- Building 166 Shipping House – 8,959 sq. ft.
- Substation – 1,527 sq. ft.
- 25-ton Truck Scale – 138 sq. ft.
- Building 168 Shipping – 2,397 sq. ft.
- Building 169 Dye Storehouse – (square footage unknown)
- Building 438 Anthracene Dye and Storage – 3,124 sq. ft.
- Building 1111 Engineering Area 3-C shop – 3,028 sq. ft.
- Building 1176 "Ponsol" Warehouse No. 2 – (square footage unknown)
- Building 1006 Tanks – 353 sq. ft.
- Building 615 – 730 sq. ft.
- Building M-4 – 3,531 sq. ft.
- Building 1268 – (square footage unknown)

Ponsol Area Chemical Process History

A variety of chemical reactions were used to produce the complex intermediates and corresponding colors, including: nitration, sulfanation, amination, fusions, chlorination, bromination, methylation, reduction, oxidation, and condensation. Many of the reactions to form the complex chemicals were carried out in high boiling solvents. Condensations were made in molten caustic soda or potash at elevated temperatures. Phthalic anhydride and anhydrous aluminum chloride were used to make both intermediates and colors. Other primary materials used in the manufacture of Ponsol Colors included:

- Sulfuric Acid
- Salt

- Iron Dust
- Copper Sulfate
- Sodium Hydrosulfite
- Bromine
- Chlorine
- Sodium bicarbonate
- Nitric Acid
- Hydrochloric Acid

The early Ponsol Color process included the purification of crude anthracene (coal tar) in the Sublimer House, which was then purified by extraction with a mixture of pyridine and solvent naphtha to remove phenanthrene. The mixture was then followed by fusion with caustic potash to fix carbazole as the potassium salt. The final step was the sublimation of purified anthracene. Anthraquionone was derived from purified anthracene by oxidation with dichloromate. The purification of the anthraquinone was completed by treatment with strong sulfuric acid at the Purification House. In 1925, the process of producing anthraquionone ended when synthetic anthraquinone derived from phthalic anyhydride was developed. Phthalic anhydride was purchased from outside vendors.

The early Ponsol Color processes were completed in the following buildings, some of which are also discussed in the section on the Dyes FA in the main report:

- Sublimer House – Crude anthracene (30%) was purified by extraction with a mixture of pyridine and solvent naphtha to remove phenanthrene.
- Purification House – Purification of anthraquinone by treatment with sulfuric acid
- Silver Salt Building (175) – Built in 1920; from 1920 through 1927 anthraquinone was sulfonated to form beta-sulfonic and alpha-sulfonic acids that then went to the Beta-Amine Building. In 1927 the building manufactured benzanthrone and chlorobenzanthrone. In 1931 building was idle, and from 1935 to 1938 dimethyldianthraquinonyl crude was produced. After 1938, the building became a warehouse and printing shop, and was razed in 1954.
- Benzathrone Building – Housed initial production of benzanthrone intermediate and three dyes. In 1927 production of benzathrone was moved to the Beta-Amine Building. From 1927 to 1954 it was used as a storehouse; in 1954 it was razed.
- Beta-Amine Building
- Potash Recovery Building (a.k.a. Ponsol #1 Building – Building179) – In 1919 the building was built for the manufacture of beta-amine. From 1919 to 1925 the building was used to complete potash recovery. In 1925 the building was rendered obsolete by the end of anthraquinone manufacturing, and was converted for production of paste crude and standardization to fine paste. In 1956 all production processes from building were consolidated in the Ponsol #2 Building (770). Ponsol #1 was razed in 1956.

- ❑ Ponsol Offices (a.k.a. Engineering M&C Area 3-C or 584)
- ❑ Change House and Lab (798) – Erected in 1938
- ❑ Warehouse – Started use in 1950 for storage of crude colors and intermediates.

Aerial Photograph Review

For the White Products FA, plant layout maps from 1919 and 1939 were reviewed along with aerial photographs dating from 1940 through 2002. Aerial photographs are provided in Appendix D. The findings are summarized here:

- ❑ The 1919 plant layout maps indicate that at least five buildings were to be built in the area generally known as the White Products area on the east side of the Dye Works Plant, along Salem Canal, and north of the Carneys Point storage magazines. A railroad line is visible running east-west, parallel to Salem Canal.
- ❑ In the 1939 plant layout map, no structures can be seen in the southeast corner of the focus area. Other observations are as follows:
  - Five Gardinol buildings can be seen in the southern portion of the focus area along Salem Canal (Bornidol House, Gardinol House, Camphene House (152), White Products House, and a camphene structure). Tanks and structures are visible north of a railroad spur. Automobile parking is visible south of the buildings but north of Salem Canal.
  - Ponsol Color #2 Building (Building 770) can be seen in the northeast portion of the focus area. An associated refrigeration building to the south is also visible, along with tank storage and railroad unloading to the west. The Ponsol Lab and Change House can be seen directly north and across Broadway Road from the 770 Building.
  - The Finished Dyes Storehouse (588) Building and associated stores can be seen in the northwest portion of the focus area.
  - A substation, office, truck scales, and miscellaneous storehouses can be seen in the northwest corner of the focus area.
- ❑ The 1940 aerial photograph shows structures similar to those on the 1939 plant layout map. A drainage swale can be seen in the southeast corner of Ponsol #2 Building and the railroad tracks. A pipeline—north of the Gardinol buildings, but south of Ponsol Buildings—is visible running east-west. The pipeline ends at the Ponsol #2 Building. In the southeast corner of the focus area, an empty lot is visible with a small, swampy area on the eastern side.
- ❑ The 1956 aerial photograph contains structures similar to those on the 1940 photograph. A drum/storage area can be seen in the southeast corner, along with an increased number of tanks/storage facilities on the north side of the Gardinol buildings (southwest corner of focus area). A long, linear pipe extends entirely across the focus area. The Bornidol (Borneol) House is no longer visible (it was dismantled between 1951 and 1956).
- ❑ The 1959 aerial photograph contains structures similar to those on the 1956 photograph. The White Products Road and new tanks/storage area to the west of the

substation building are visible. The drainage swale was filled in, and a parking lot can be seen to the east of the focus area. A new building, Building 615, also is visible.

- In the 1964 aerial photograph, the new Building M-4 can be seen, and new tanks are visible north of the drum storage area and south of Ponsol Color #2 Building (Building 770). The truck scale is no longer visible on this photograph.
- In the 1974 aerial photograph, the expansion of the laydown area to the north is visible. The substation is no longer visible, but vehicles and/or storage can still be seen in the area. One trailer-type building north of the storage area is no longer visible.
- In the 1979 aerial photograph, smaller storage buildings north of Building 588 are no longer visible.
- In the 2001 aerial photograph, the Ponsol Color #2 (Building 770) and the Ponsol Storehouse (Building 588), as well as all the surrounding support buildings, are no longer visible. The following buildings are still visible on this photograph:
    - M-4 Building (with an additional building to the south)
    - White Products Buildings 149 and 152
    - White Products “A”(Building 788) (with storage along northern side of building)
    - Storage area in southeast corner
- In the 2002 aerial photograph, Buildings 149 and 152, and the tank storage to the north, are no longer visible.

APPENDIX F

DYES FOCUS AREA
SUPPLEMENTAL INFORMATION

Dyes Focus Area: Supplemental Information

Buildings in the Dyes Focus Area (FA)

Sulfuric Acid Plant

The general layout of buildings associated with the Sulfuric Acid Plant can be seen in building drawings from 1917 through 1963. Although no names are provided on the 1917 and 1919 maps, names are shown on the 1939, 1952, and 1963 maps. A records review indicated that the buildings listed below were located in this area.

Building Number	Name
93	Industrial Offices
104	Blower (1952)
105	O.V. Laboratory
107	Preheater and Converter House
(no identification)	(2) Acid Storage Tank
112	Mixing and Storage
113	Oleum [fuming sulfuric acid ($S0_3$)] House
95	Sulfur Storage Area

In addition to these buildings, numerous tanks and other buildings are identified in the area, although no further information is available.

Naphthalene Intermediates Area

All buildings and tanks in this area were used for the production of naphthalene and other nitrobenzene intermediate compounds that were common building blocks for dye production. A records review indicated that the buildings listed below were included within this area.

Building Number	Naphthalene Area Name
115	Low Pressure Autoclave House (not on 1935 building outline map)
117	Naphthalene Reducer House (not on 1935 building outline map)
121	Naphthalene Nitrating House
122	Alpha Naphthylamine Building (Phthalic Anhydride "A" Plant)
123	Crude Naphthionic Acid Building
124	Naphthalene Purification House
114	Sulfonating House
112	Autoclave House (building number difficult to read on map)
117	Reducer House
743	Phthalic Anhydride Building
200	Benzidine House
138	Benzidine Distillation
667	Naphthalene Laboratory
1024	Change House (1963 Building Map)
1027	Naphthalene Autoclave #2
741	Naphthalene Change House
No identification	Building for melting crude naphthalene (building shown on 1935 map)
123	"Ceresan" House
118	Office/Laboratory
No identification	Beta-Naphthylamine Bldg (not on 1935 building outline map)

No identification	PNBA (p-nitrobenzoic acid) plant (not on 1935 building outline map)
540	HCL Storage
137	Hydron Blue House
139	Safranine House
141	Sodium Hydrosulfide

In addition to these buildings, numerous tanks and other buildings are identified in the area although no further information is available.

Basic Colors and Sulfur Colors Areas

A records review indicated that the buildings listed below were included in these two areas.

Building Number	Name
Basic Colors Buildings	
No identification	Auramine Building
139	Saphranine Building
212	Basic Pink (called Basic Pine House)
211	Victoria Green Building (called Basic Green House in GIS)
202	Eosine Building
214	Basic Colors Storage
553	Change House (1952 Building Map)
189	Store House
193	Crystal Violet Building
No identification	"Monastral Building"
191	Magenta
186	Basic Colors Dry House #2
195	Basic Colors Dry House #1
632	Laboratory
785	Basic Colors Change House
632	Basic Colors Lab
Sulfur Colors Buildings	
724	Sulfur Black (dinitrophenol also produced here)
204	Sulfur Blue
208	Sulfur Colors
137	Hydron Blue
489	Store (1952 Building Map)
435	Zinc Oxide Incinerators (1952 Building Map)
598	Sulfur Colors Lab and Office

Azo Colors Area

A records review indicated that the buildings listed below were included in this area.

Building Number	Azo Color Area Bldg Name
656	Azo Offices and Labs
197	Diamine Building*
141	Sodium Hydrosulfide Building*
614	Azo Change House
174	Azo Grinding and Mixing
185	Azo Stores
183	Azo “A”, “B”, and “C” Plants
180	Eng Office

896	Tank Farm
129	m-Nitroaniline (MNA) (Picramic Building*)

* These buildings were transferred to the Azo Colors unit in 1956 and were transferred to the Naphthalene Intermediate area in 1958.

Ponsol Colors Area

A records review indicated that the buildings listed below were included in this area.

Building Number	Ponsol Colors Number 1 Area Name
179	Ponsol Colors #1
181	Ponsol Stand
175	Store House
176	Sulfanthrene Stores
584	Ponsol Lab and Offices

Aerial Photograph Review

Aerial photographs dating from 1940 to 2001 were reviewed for this focus area. Because of quality issues, the following aerial photographs were not reviewed: 1940, 1942, 1943, 1944, 1951 [U.S. Army Corps of Engineers (ACOE)], 1962, 1964 (ACOE), and 1974 (ACOE).

Aerial photograph interpretation was limited for this area because the collection interval for aerial photographs was much longer than the time period in which the Dyes FA was used and regularly modified. Site retiree interviews did not yield additional information because few retirees had ever flown over the Chambers Works site and lacked spatial orientation for a top-down view. Aerial photographs are provided in Appendix D. A summary of significant findings is presented below.

Sulfuric Acid Plant

The Sulfuric Acid Plant is visible on the 1940 aerial photograph. Most of the buildings and tanks shown on the building drawing are also visible on this aerial photograph. A parking lot is just to the north of the plant, between Building 104 and the industrial office building (Building 93). A bright open area (also a parking lot) is visible in the northeast corner of the plant. (In the future, railroad tracks will be laid down in this area.)

The 1946 aerial photograph does not differ markedly from the 1940 aerial photograph, but the 1946 photograph is of low quality. North of the plant, a new building is visible on the site of the former parking lot. The parking lot to the northeast is still visible, but does not appear to be used for parking any longer; additional tanks appear to have been built south of this parking area.

The 1951 photograph shows no significant changes. However, one rail spur appears to have been added and appears to serve the Sulfur Colors House to the east (Building 208).

Although the 1956 aerial photograph is of low quality, it does not show any significant differences from the 1951 photograph.

The 1959 aerial photograph does not show any significant differences from the 1956 photograph. A second rail spur has been added to the east.

The 1964 aerial photograph does not show any significant differences from the 1959 photograph. A second rail spur has been added to the east as well as several small structures along this new rail spur. Smoke from chimneys indicates this area is in operation.

The 1974 aerial photograph shows significant changes to this area. The Reducer House (Building 139) appears to have been removed, but the foundation is still present. An unidentified building/pipe manifold shack to the south of the Preheater building has been removed, as well as a small building (Building 91) east of the Industrial Offices (Building 93). A small building has been added immediately south of the industrial offices and additional tanks and associated piping has been built in the parking lot to the northeast, greatly reducing the size of the parking lot.

The 1979 aerial photograph shows additional construction of tanks in the northeast parking lot, but no other major differences.

By 1995, dismantlement is becoming more obvious in this area. The large Sulfonating building has been removed as well as the small buildings south of the Industrial Offices (Building 93).

By 2001–2002, the Sulfuric Acid Plant has been completely dismantled and removed. Foundations of buildings and tanks are visible throughout the area. Several manufacturing assets (piping, tanks, manifolds) are still present.

Naphthalene Intermediate Aerial Photograph Review

The only map with building names is the 1939 building layout map, and this map was used to establish the initial location of each building. Aerial photographs were then used to track changes from 1939 to the present. Based on the 1939 building layout map, nearly all of the buildings in the Naphthalene Intermediate area can be identified:

- 114 Sulfonating House
- 117 Reducer House
- 121 Naphthalene Nitrating House
- 122 Naphthalene Distillation and Phthalic Anhydride
- 743 Phynal Anhydride
- 123 Naphthalenic Acid
- 126 Intermediates Purification House
- 200 Benzidine House
- 198 Oxy House
- 197 Diamond (Diamine) House
- 170 (unknown)
- 741 Naphthalene Change House
- 667 Naphthalene Laboratory
- 138 Benzidine Distillation
- 141 Sodium Hydrogren

- ❑ 144 Store House
- ❑ 145 Intermediate Store House
- ❑ 614 Change House
- ❑ 148 Barrel House (correction from Barhol)

Other buildings serving other business and production units—such as the Azo laboratory (Building 656), Saphranine (Building 139), and Hydron Blue (Building 137) buildings—are also located in this area. Some buildings, such as store houses, and changing rooms may have been used routinely for functions other than those solely for the benefit of the Naphthalene Intermediate area.

The 1940 aerial photograph generally confirms the building layout map of 1939. The resolution is not high enough for detailed analysis, but it is obvious that the area is highly industrialized and areas between the buildings are separated by parking lots, tanks, and other infrastructure.

The 1946 aerial photograph is dark and has low resolution. Given this limitation, no significant differences are apparent between the 1946 and 1940 aerial photographs.

The 1951 aerial photograph is of good quality. By comparing this photograph with the 1940 aerial photograph suggests that the Nitrating House (Building 121) had been removed by 1951. (This removal is confirmed in the site records: due to structural inadequacies, Building 121 was dismantled in or about 1940.) In addition, a large building has been constructed immediately west of the Barrel House. No information is available about this new building. These changes seem to be substantiated on the 1945 building layout map, so the changes seem to have occurred between 1940 and 1945. (The changes are not apparent on the 1946 aerial photograph, probably because of its low quality.) An open area just south of the change house (Building 614) is now used either as a storage area or tankfarm—the resolution is too low to determine with certainty.

The 1956 aerial photograph is dark and monochromatic. No real details can be discerned, although it is apparent that this photograph does not differ significantly from previous photographs. Site records indicate that the Alpha-Naphthalamine Building (Phthalic Anhydride A plant, Bdlg 122) became the Engineering Department shop and storehouse in 1955.

The 1959 aerial photograph is of good quality. Based on this photograph, an unidentified building immediately north of the Phynal Anhydride plan has been removed since 1956 and that the intermediate store house (Building 145) has been reduced to half its previous size. Site records indicate that the Naphthalene Purification House (Building 124) was to be torn down in 1959, and the 4-nitro-2-aminotoluene and 4-nitro-2-aminoanisole processes were moved to Sulfonating House.

The 1964 map is the best representation available, and confirms that the land south of the Change House (Building 614) is being used for storage tanks of some kind (as suggested by the 1951 aerial photograph).

Although the 1974 aerial photograph is dark and shadowy, it is apparent that the following buildings have been dismantled down to their foundations:

- ❑ Reducer House
- ❑ Benzidine House
- ❑ Hydrogen Building (Hydron Blue)
- ❑ Sodium Hydrogen

In addition, new buildings appear south of the unknown building that replaced the Barrel House, and new tanks may be visible south of the Change House (Building 614).

The 1979 aerial photograph shows continued dismantlement. The Napthalenic Acid building (Building 123) is gone, and a new, small, operational facility of some kind appears to have been constructed on the location of the former Reducer House (Building 117).

The 1995 aerial photograph has low resolution. In this photograph, the Sulfonating House (Building 114), Change House (Building 614), Intermediates Purification House (Building 126), Saphrine House (Building 139), and Benzidine House (Building 138) all have been dismantled. A new, larger building appears to have been constructed at the former location of the Reducer House (Building 117).

The 2001 and 2002 aerial photographs show the site in its current configuration. Nearly all buildings have been removed. The Phynal Anhydride Building (Building 743) and Naphthalene Change House (Building 741) have been dismantled down to their foundations.

Basic Colors and Sulfur Colors Aerial Photograph Review

The only map with building names is the 1939 building layout map, and this map was used to establish the initial location of each building. Aerial photographs were then used to track changes from 1939 to the present. Based on the 1939 building layout map, nearly all of the buildings in the Basic Colors area can be identified:

- ❑ Basic Colors Buildings
  - 139 Saphranine Building (see Naphthalene Intermediate Area Discussion) (new from researchers)
  - 212 Basic Pink (error in GIS, called Basic Pine House)
  - 211 Victoria Green Building (Called Basic Green House in GIS)
  - 189 Magenta Building
  - 193 Crystal Violet Building
  - Laboratory
  - Basic Colors House
  - 785 Basic Colors Change House
- ❑ Sulfur Colors Buildings
  - 724 Sulfur Black
  - 204 Sulfur Blue
  - 208 Sulfur Colors
  - 137 Hydron Blue (see Naphthalene Intermediate Area discussion)

In addition, some buildings, such as store houses, changing rooms, the Latex House (Building 202), the Vacuum Pump (Building 335), and others may routinely have been used for functions other than those solely for the benefit of the Basic Colors or Sulfur Colors production units.

The 1940 aerial photograph generally confirms the building layout map of 1939; the resolution is not high enough for detailed analysis, but it is obvious that the area is highly industrialized and areas between the buildings are separated by parking lots, tanks, and other infrastructure.

The 1946 aerial photograph is dark and has low resolution. Given this limitation, no significant differences are apparent between the 1946 and 1940 aerial photographs.

The 1951 aerial photograph is of good quality. Although there appears to be several additions to the eastern side of the Sulfur Blue House (Building 204), no significant changes to the area are apparent.

The 1956 aerial photograph is dark and monochromatic. Although no real details can be discerned, it appears that the Basic Pink House (Building 212) and the Basic Green House (Building 211) have been dismantled down to their foundations.

The 1964 map is the best representation available; no significant changes are apparent since 1956.

The 1974 aerial photograph is dark and shadowy, especially the Basic Colors Area. The Sulfur Blue house (Building 204) has been dismantled and a tank farm has been constructed in the location of the Basic Pink House (Building 212) and the Basic Green House (Building 211), both of which had been dismantled previously.

The 1979 aerial photograph shows that work is ongoing in the Basic Colors Area with little dismantlement. In this photograph it appears that the Latex House (Building 202) has been dismantled and replaced with another structure.

The 1995 aerial photograph has low resolution, but it is obvious that the Basic Colors Area has been, or is in the process of being, completely dismantled. Very few contiguous structures remain and Conex containers, or truck trailers, cover much of the area. By 1995, the following buildings have been removed:

- ❑ 189 Magenta Building
- ❑ 193 Crystal Violet Building
- ❑ Laboratory
- ❑ Basic Colors House
- ❑ 189 Store House
- ❑ 186 Store House

The 2001 and 2002 aerial photographs show the site in its current configuration. Nearly all buildings related to the dye production business have been removed; only those used for the current business operations remain.

Azo Colors Area Aerial Photograph Review

The only map with building names is the 1939 building layout map, and this map was used to establish the initial location of each building. Aerial photographs were then used to track changes from 1939 to the present. Based on the 1939 building layout map, nearly all of the buildings in the Azo Colors area can be identified:

- ❑ 190 Color Dry House
- ❑ 170 (name unknown)
- ❑ 196 Grinding and Mixing
- ❑ 183 Azo House
- ❑ 135 Azo Intermediates
- ❑ 174 Crude Dye Store
- ❑ 174 Azo Drying and Grinding
- ❑ 656 Azo Laboratory

In addition, some buildings located in this area, such as store houses, changing rooms, and others may routinely have been used for functions other than those solely for the benefit of the Azo production units. The database for buildings and their use is quite sparse—a number of buildings and tanks are unlabeled and their usage is unknown.

The 1940 aerial photograph generally confirms the building layout map of 1939. The resolution is not high enough for more detailed analysis, but it is obvious that the area is highly industrialized and areas between the buildings are separated by parking lots, tanks, and other infrastructure.

The 1946 aerial photograph is dark and generally low resolution. Given this limitation, no significant differences are apparent between the 1946 and 1940 aerial photographs.

Although the 1951 aerial photograph is of good quality, the dark color and crowding of the buildings in the Azo Colors area does not permit detailed feature interpretation.

The 1956 aerial photograph is dark and monochromatic; no real details can be discerned.

The 1959 aerial photograph is of good quality. In this photograph is appears that the front of the Azo House (Bldg 183) that was identified as the Ponsol Standardization House (Bldg. 181) has been demolished or modified in some way. No other differences are evident.

The 1964 map is the best representation available. Based on the 1939 building layout map, it appears that the Azo Colors area has been modified very little since 1939.

Although the 1974 aerial photograph is dark and shadowy, it appears that the Grinding and Mixing Building (Bldg 196) has been dismantled and tanks are now located here. The area just north of the Crude Dye Storage (Bldg 174) is now used as a parking lot, suggesting a possible change in use (or increase in use) of this building.

The 1979 aerial photograph shows dismantlement is underway in the Azo Colors area. The Azo Laboratory (Bldg 584) appears to have been dismantled as well as the Dye

Drying House (Bldg. 190). (It is possible that the Drying House was gone by 1974, but its absence was hidden in the shadows of the 1974 photograph.)

The 1995 aerial photograph has low resolution, but it is obvious that the Azo Colors area has been, or is in the process of being, totally dismantled. Very few contiguous structures remain and Conex containers, or truck trailers, cover much of the area. The following buildings have been removed by 1995:

- ❑ 174 Crude Dye Store (replaced with some new building of unknown usage)
- ❑ 183 Azo House

The 2001and 2002 aerial photographs show the site in its current configuration. Nearly all buildings related to the dye production business have been removed and only those used for the current business operations remain.

Ponsol Colors Aerial Photograph Review

The only map with building names is the 1939 building layout map, and this map was used to establish the initial location of each building. Aerial photographs were then used to track changes from 1939 to the present. Based on the 1939 building layout map, only some of the buildings in the Ponsol Colors area can be identified:

- ❑ 181 Ponsol Standardization House
- ❑ 179 Ponsol Colors House #1
- ❑ 584 Ponsol Labs and Offices
- ❑ unidentified Building to the east
- ❑ unidentified Building to the east
- ❑ unidentified Building to the northeast

In addition, some buildings located in this area, such as store houses, changing rooms, and others may routinely have been used for functions other than those solely for the benefit of the Ponsol Colors production. The database for buildings and their use is quite sparse—a number of buildings and tanks are unlabeled and their usage is unknown.

The 1940 aerial photograph generally confirms the building layout map of 1939. The resolution is not high enough for detailed analysis, but it is obvious that the area is highly industrialized and areas between the buildings are separated by parking lots, tanks, and other infrastructure.

The 1946 aerial photograph is dark and generally low resolution. Given this limitation, no significant differences are apparent between the 1946 and 1940 aerial photographs.

The 1951 aerial photograph is of good quality. A small building or structure appears to have been constructed to the east of the Ponsol Labs (Bldg 584). No other significant differences are apparent between the 1946 and 1940 aerial photographs.

The 1956 aerial photograph is dark and monochromatic. Details are difficult to discern, but it appears that a small addition has been made to the western side of the Ponsol Laboratory (Bldg 584).

The 1959 aerial photograph is of good quality and confirms other records: the Ponsol #1 Building (Bldg 183), as well as three unknown buildings to the east, have been dismantled and removed. It is possible that the Ponsol Standardization House (Bldg 181) has also been removed, but removal cannot be determined with certainty. A long, low building of unknown usage has been constructed on the footprint of the two unknown buildings that were to the east of the former Ponsol #1 Building.

The 1964 map is the best representation available; no significant changes are noted.

The 1974 aerial photograph is particularly dark and shadowy, but is less shadowy in the area of Ponsol #1 Building. A parking lot has been constructed just to the north of the long low building. This parking lot covers the old footprint of the building (of unknown usage) that used to be northeast of the Ponsol #1 Building.

The 1979 aerial photograph shows that the old Ponsol Dye Lab and Office (Bldg 584) have been removed.

The 1995 aerial photograph has low resolution. Very few contiguous structures remain and Conex containers, or truck trailers, cover much of the area.

The 2001 and 2002 aerial photographs show the site in its current configuration. All buildings related to the Ponsol Color production business have been removed and only those used for the current business operations remain.

APPENDIX G

JACKSON LABS FOCUS AREA
SUPPLEMENTAL INFORMATION

Jackson Labs Focus Area: Supplemental Information

Aerial Photograph Review

For the Jackson Laboratory (Jackson Labs) Focus Area (FA), plant layout maps from 1919, 1939, 1945, 1952, and 1963 were reviewed along with aerial photographs dating from 1940 through 2002. Aerial photographs are provided in Appendix D. The findings are summarized here:

- The 1919 plant layout maps indicate that the power plant existed as well as several rail lines and other buildings along the eastern end of the area. A perimeter fence can be seen running north to south separating the Deepwater Dye Works on the eastern half from the Fenton’s Beach community to the west. Two large structures labeled “Jackson Labs” and one labeled “Tech Lab” can be seen outside the perimeter fence adjacent to small structures believed to be private residences.
- In the 1939 plant layout map, no residential structures are shown, and the Deepwater Dye Works covers the entire area. Other observations are as follows:
  - Power and Utilities: Two fuel oil storage tanks can be seen to the west of the Boiler House, and a transformer pad and electrical switching station is shown south of the boiler house. A structure labeled “Naphthalene Melt #744” is observed to the northwest of the Boiler House.
  - Laboratory: Additional laboratory buildings, parking lots, and a cafeteria are shown. The southwest corner of the area is the site for a United States Lighthouse Reservation.
  - Semi-Works: Several buildings associated with Indigo dye manufacturing are shown in the eastern portion of the area adjacent to railroad spurs. Several buildings associated with Semi-Works colors operations are shown to the north. A building labeled “Gas Produce” is shown to the north of the Boiler House and directly east of Gas House Street.
- The 1940 aerial photograph contains structures similar to those on the 1939 plant layout map.
- The 1946 aerial photograph contains structures similar to those on the 1939 plant layout map.
- The 1952 plant layout map shows structures similar to those on the earlier aerial photographs. The Naphthalene Melt area (northwest of the Boiler House) has been expanded with an additional building (#812) and a storage tank.
- The 1962 aerial photograph and 1963 plant layout map contain structures similar to those on the 1952 photograph. The fuel oil tanks west of the Boiler House first observed on the 1939 aerial photograph have been replaced with a new water treatment plant structure. A parking lot is visible where the former water treatment plant had been located south of the Boiler House.

- No significant site changes were evident on the 1974, 1975, 1979, and 1995 aerial photographs with the exception that several buildings that are no longer visible – buildings associated with Indigo dye manufacturing (Buildings 33, 34, 36, and 38) and Semi-Works Buildings 1043 and 1047 were removed prior to 1974 and replaced by parking lots.
- In the 2001 aerial photograph, several buildings are no longer visible, including Buildings J-81, J-1, and 655.
- In the 2002 aerial photograph, no site changes were visible.

APPENDIX H

TEL FOCUS AREA SUPPLEMENTAL INFORMATION

TEL Focus Area: Supplemental Information

This appendix contains supplemental information about the TEL Focus Area (FA).

The first location of tetraethyl lead (TEL) production was in the idle Saltpeter Refinery Building (leftover from Carneys Point and WWI) which was remodeled and equipment was installed for producing ethyl bromide, lead disodium and TEL. Plant production of TEL started in August 1923. In August 1924 TEL production reached a rate of 100,000 pounds per month and Standard Oil Company announced discovery of new reaction for the formulation of TEL from lead monsodium alloy and ethyl chloride. Jackson Lab began researching a way to process TEL that did not require the use of bromine and completed an economic study on the new reaction using ethyl chloride. Ethyl Gasoline Corp was formed in 1924 as a jointly owned corporation of GM and Standard Oil and engaged DuPont to produce its TEL. Therefore, in 1924 a new plant (called “A”) was being built at Chambers Works for the ethyl chloride process.

In 1925, DuPont separated the TEL area into its own distinct operation area. Ethyl chloride was purchased from other firms from 1924 until 1927, when the Basic Color area was assigned to manufacture ethyl chloride for TEL. In 1929, second TEL building plant “B” started production. In 1930, third plant “C”started production. A fourth building “D” was also built in 1930 but not operated. In 1935 fifth building plant “E” was up and running. Additionally in 1935, ethyl chloride bulk storage and recalfication equipment was moved to a remote location. In 1942 production decreased due to civilian market decreases but increased during the WWII for use in both auto and plane fuel. Due to increases in demand, DuPont worked on accelerating the reaction rates and developed a process that used acetone as a catalyst. By 1957 the production for the antiknocks area was 194 million pounds.

The U.S. EPA began to regulate the lead content of domestic gasoline starting in approximately 1973. This resulted in a gradual decline in the production of TEL at the site, which ultimately lead to the business shut-down in 1991 and decontamination and demolition of the site structures between 1991 and 2001. Approximately 300,000 pounds per day of TEL was produced in the last few production years.

Aqueous streams from the TEL area were processed for lead recovery with the surface water runoff from the production area in an accelerator clarifier. The clarifier required pH adjustment with hydrochloric acid (HCL) because the pH was so basic. The adjustment facilities precipitated inorganic lead salts which was dewatered with a centrifuge. Solids recovered in centrifuge were directed to a spray furnace for lead recovery.

The clarifier overflow was discharged into the C Basin – SWMU 16 to which sodium borohydride was added. The sodium borohydride served as a reducing agent for the organo-lead salts. The overflow from the basin was directed to the plant wastewater treatment facility, while the dredged solids were centrifuged.

Ethyl chloride was not manufactured in the TEL area. However it was used in the process of TEL production and was stored in several storage tanks in the focus area as shown on building map Figure 8-2.

Groundwater and soil data associated with the TEL area are further discussed in the pathway analysis section.

Chemical Process History

Basic Process Information

DuPont manufactured two individual tetraalkyl lead compounds at the Chambers Work Plant: tetramethyllead and tetraethyl lead.

- ❑ Tetramethyllead (TML) was produced by reacting methyl chloride with sodium/lead alloy and alkyl aluminum to produce tetramethyllead, sodium chloride, and lead
- ❑ Tetraethyllead was produced by reacting ethyl chloride (C2H5Cl) with sodium/lead alloy with acetone to produce TEL, sodium chloride, and lead
- ❑ These two compounds then could be combined in the presence of a catalyst resulting in the final production mixture of :
- ❑ Tetramethyllead
- ❑ TEL
- ❑ Trimethylethyllead
- ❑ Triethyl-methyllead
- ❑ Dimethyldiethyllead

Yields ranged from 85% to 90% as based on the sodium feedstock used. DuPont produced motor fuel antiknock compound (MFAC) as a blend of approximately 61% TEL, with some or all of the following additives: dye, ethylene dibromide, ethylene dichloride, antioxidants and various hydrocarbon dilutents (i.e. kerosene). Tetraalkyllead compounds were sold by DuPont in an mixture with 1,2-DCA and/or 1,2-dibromoethane.

Tetraaethyllead could be produced in either of two productions units. The older unit, a batchwise TEL production unit consisted of several trains of reactors and auxiliary equipment and had a design production capacity of 38 million pounds/year. The second production unit consisted of a continuous TEL unit and had a design production capacity of 96 million pounds/year. The continuous production line was started in 1957.

Waste streams generated as results of antiknocks production at Chambers Works would have been expected to contain many of the following components:

- ❑ Raw materials – ethyl chloride and/or methyl chloride
- ❑ Catalysts – acetone, aluminum chloride and/or Lewis acids
- ❑ Raw material impurities – chlorinated alkanes and alkenes in the lower relative molecular weight ranges
- ❑ Additives – sodium thiosulfate, sulfur, and/or soaps
- ❑ Diluent – toluene
- ❑ Products TEL, TML in addition to redistribution products

- Incomplete reaction products (mon-, di-, trisubstitution alkylleadchlorides)
- By-Products (metallic lead and sodium chloride)
- Principal side products – ethane and/or butane
- Less typical side products – mono-, di- and trisubstitution alkylleadchlorides, and ethane and methane, as appropriate

TEL Continuous Process

TEL was produced continuously in an agitated cascade reactor. Molten sodium/lead alloy, which was manufactured by DuPont, was fed to the reactor with excess ethyl chloride, a catalyst and pure acetone. The reactor was maintained at an elevated temperature and pressure and ethyl chloride was refluxed into the reactor to provide adequate cooling. The crude product stream, which contained sodium chloride, ethyl chloride, lead, and butane in addition to the TEL was discharged from the reactor to a stripper. Steam and water were employed as the stripping media with sodium dichromate added to prevent agglomeration of the fine metallic lead by-product. The materials leaving the stripper were directed to a cyclone separator where impure product, excess ethyl chloride, water, and butane were separated from the solid lead and sodium chloride by-products. The stream containing the product was removed while the stream containing the solid by products was directed to a washer.

The product-rich stream leaving the cyclone separator was distilled to separate the TEL product from the excess ethyl chloride. The TEL was recovered as the distillation bottom stream. TEL was purified by washing with process water (treated or filtered river water) to remove impurities, such as bismuth. The TEL product was subsequently blended with stabilizing agents and shipped or directed to the redistribution process. The wash water was decanted and directed to the lead recovery area.

The solid lead by-product sent to the washer was washed with water to dissolve the sodium chloride. The aqueous effluent from the washer was directed to the lead recovery process area. The material remaining in the washer was dewatered with hydraulic presses. The solid material from the pressing operation was sent to the lead recovery process area.

Following pressing the solid lead was conveyed to a melt pot where it was covered with a molten sodium hydroxide (NaOH) layer. Reducing agents were added to the molten lead in the melt pot to reduce inorganic lead to the elemental state. The melted lead was then recycled to the sodium/lead alloy manufacturing unit. The distillation overhead stream mainly consisted of ethyl chloride. The stream was distilled to both dry the chloroethane and remove impurities such as butane. The purified ethyl chloride was recycled to the reactor. The remaining material (water, butane) was used as an auxiliary fuel in the furnaces.

Batch Processes

TEL

The TEL batch process was similar to that of the continuous process with a few variations. First the sodium/lead alloy was added to the reactor as a flaked solid rather than in a molten state. The alloy was flaked under a blanket of dry nitrogen (too keep out air) and transferred to the reactor via locked hoppers. Excess ethyl chloride and acetone catalyst were added over a period of time to the reactor, following which the reaction was allowed to proceed at an elevated pressure and temperature. Following the completion of the reaction the excess ethyl chloride was allowed to vent from the reactor. The material was purified by distillation prior to storage. The ethyl chloride produced during distillation was recycled for use in production of successive batches of TEL.

The crude product was discharged to a steam distillation operation where TEL was separated from solid by-products (sodium chloride and metallic lead). In addition to the antiagglomerating agents, sulfur and sodium thiosulfate, "Acintol FA-1" was added to the batch process as a stripping agent. The slurry of by-products was dropped into washing pits. Solids (mainly lead) were washed with water to remove sodium chloride by-product. Solids were dredged, moderately dried, bricked, and melted in the lead recovery furnace. The aqueous effluent was directed to the lead recovery unit. A similar procedure was used for the product as discussed in the continuous process.

The slag from the melting operation was solidified and sold to a secondary refiner for lead recovery. Flue dust that was emitted from the furnace was collected in fabric filter was packaged in boxes and sold to a lead recovery contractor.

TML

Tetramethyllead was also manufactured at Chambers Works using a batch production unit consisting of several trains which operated sequentially and design production capacity was 28.5 million pounds/year. TML was manufactured in a similar manner to the batch TEL processes described above. Flaked lead was introduced into the reactor under nitrogen but methyl chloride and aluminum chloride were added to the reaction vessel. The reaction vessel was kept at a very high pressure and temperature and was manufactured and handled in the presence of toluene to serve as a diluent and to slow the violent decomposition of the TML. The principal side-product was ethane and sodium chloride.

After the reaction occurred the excess methyl chloride was vented from the reactor and purified by distillation and ultimately recovered in a similar fashion as the ethyl chloride.

Redistribution Mixture Production Process

The redistribution mixture of TEL or TML was produced by reacting specified quantities of TEL and TM. Following the completion of the reaction, the crude redistribution mixture product was washed with a caustic solution to remove the catalyst. The aqueous caustic washing solution was then stored before being recycled for use in the stripping operation of the TML production unit. The product mixtures were then subsequently blended with the following additives prior to shipment:

- Ethylene dibromide
- Ethylene dichloride
- Kerosene
- Dyes

- Antioxidants

Aerial Photograph Review

Nineteen aerial photographs, dating from 1940 through 2002, were available for review of this focus area. Aerial photographs are provided in Appendix D. The findings are summarized here:

- The TEL productions building, various storage tanks, and many miscellaneous buildings are visible on the 1940, 1951-1, 1964, 1974, and 1979 photos.
- The large storage tank (part of SWMU 40) first appears on the 1974 photo.
- The Delaware River clearly appears in all of the photos.
- In the 1995 photo, it becomes apparent many structures have been dismantled. The three storage tanks (SWMU 40) remain in place.
- In the 2001 and 2002 photos, there are only a few building remaining, overhead power lines are visible, and the former lead ethyl tanks in the northeastern corner of TEL and the three tanks that make up SWMU 40 are visible.

APPENDIX I

FLUOROPRODUCTS FOCUS AREA SUPPLEMENTAL INFORMATION

Fluoroproducts Focus Area: Supplemental Information

This appendix contains supplemental information about the Fluoroproducts Focus Area (FA).

Aerial Photograph Review

Aerial photographs and building maps of the Fluoroproducts FA were reviewed. Aerial photographs are provided in Appendix D. The findings are summarized here:

- The 1917 and 1919 building maps indicate buildings were present in the FA, but none of them were part of *Freon*® manufacture; most likely, they were part of other Chambers Works processes.
- The 1939 building map shows buildings and structure that are part of the *Freon*® manufacturing processes. The “main process area” is near the Delaware River. In this area, a building numbered “339” is identified as the “Reactivity House”. There are also nine aboveground storage tanks (ASTs) numbered “677” and identified as “molasses tanks.” The other structures visible are part of shipping, general storage, and/or transportation.
- The 1940 aerial photograph is good quality and allows ascertaining building and structure layout, which appears to be consistent with the 1939 building map.
- The 1945 and 1952 building maps primarily show the same buildings and structures as the 1939 building map.
- The 1946 aerial photograph is slightly blurry but of good enough quality to ascertain building and structure layout, which appears to be similar to the 1940 aerial photograph.
- The 1951 aerial photographs are of good quality, and the layout appears to be similar to the 1946 aerial photograph.
- The 1956 aerial photograph is of good quality, and the layout appears to be similar to the 1951 aerial photograph. The nine ASTs south of the main process area have been removed, but the AST footprints are still visible. Also, fewer buildings are visible in the Manhattan Engineering District (MED)-related area.
- The 1959 aerial photograph is slightly blurry but good enough quality to ascertain building and structure layout, which appears to be similar to the 1956 aerial photograph.
- The 1964 aerial photograph is of good quality, and the layout appears to be similar to the 1959 aerial photograph. However, three new ASTs are visible within the footprints of the previous ASTs.
- The 1974 aerial photograph is of good quality, and the layout appears to be similar to the 1964 aerial photograph. One additional AST is visible within the footprint of a previous AST. Also, buildings in the MED-related area are no longer visible; a parking lot is now visible there.

- The 1977 building map shows fewer buildings or structures than earlier building maps. However, the building/structure layout does not correlate with the 1974 and 1979 aerial photographs, so the accuracy of the 1977 building map is suspect.
- The 1979 aerial photograph is of good quality, and the layout appears to be similar to the 1974 aerial photograph.
- The 1990 building map shows fewer buildings or structures than earlier building maps. However, the building/structure layout does not correlate with the 1979 and 1995 aerials, so the accuracy of the 1990 building map is suspect.
- The 1995 aerial photograph is slightly blurry but good enough quality to ascertain building and structure layout, which appears to be similar to the 1979 aerial photograph.
- The 2001 aerial photograph is of good quality, and the layout appears to be similar to the 1995 aerial photograph.

APPENDIX J

ARAMIDS AREA FOCUS AREA SUPPLEMENTAL INFORMATION

Aramids Focus Area: Supplemental Information

This appendix contains supplemental information about the Aramids Focus Area (FA).

Aerial Photograph Review

For the Aramids FA, plant layout maps from 1919, 1939, 1945, 1952, and 1963 were reviewed along with aerial photographs dating from 1940 through 2002. Aerial photographs are provided in Appendix D. The findings are summarized here:

- The 1919 plant layout. Map shows Carneys Point dry houses and bunkers and a construction store on the far east side of focus area. In the central portion of the area (triangle made by railroads) was a hospital, lead shop, oil shop, and combined shop. Storehouses and a furnace are located in the southern most half of the area between the crescent railroad and a single east- west railroad line. A pump area and tar still are located just south of railroad crescent starts (approximately under existing Building 1016). Just over the western focus area line was a 25,000-gallon water tank.
- In the 1939 plant layout map observations are as follows:
  - Parking Lot/Aramids: Generally open ground with one magazine for the Carneys Point plant. A small sand blasting area is noted in the southern most portion of this sub area just north of a three pond area.
  - General Shops and Storehouses: South of the railroad tracks the buildings included change houses, car repair shop and a large combined shop that included a wash pit. Off to the east of the change house was a sand blast area. To the far east of the sub area was sand and gravel storage, a well, and Engineering storehouse. North and close to the railroad tracks was general storehouse, salvage storage areas, a lead melt pot, and a paint shop. Another well existed to the north of these shops, but looks to have been in southern most portion of the Alcohol Plants fenced-in area.
  - Elastomers: Generally open ground except for waste water storage basin and MVA Manufacturing building is present in the far southeast corner of the focus area.
- The 1940 aerial photograph contains similar structures as those on the 1939 plant layout map. Filling of western side of Parking Lot and Aramids is occurring in what looks to be large area of surface water. Filling is occurring on Elastomer side near Monovinylacetylene (MVA) Manufacturing building and “waste water storage” area. Second MVA building is visible in the far southeast corner of the focus area
- The 1942 aerial photograph contains similar structures as those on the 1940 aerial photograph with more filling noted to the west near the Basin area.
- The 1944 aerial photograph contains similar structures to those on the 1940 aerial photograph with the addition of a set of buildings southeast of the Alcohol Plant (see Fluoroproducts Focus Area). Filling activities still observed to the eastern side of Alcohol Road.

- The 1946 aerial photograph contains similar structures as those observed on the 1944 aerial photo. A parking lot now exists over previous fill on the east side of Alcohol Road. Waste water area still present in the far eastern side of focus area north of MVA Manufacturing building.
- The 1951 aerial photograph contains similar structures as those observed on the 1946 aerial with the addition of the 852 building along Kinetic Road, and a ditch located north of the building trending east toward the basins. A well defined drainage ditch is observed on the southern portion of the focus area trending southeast to northwest leading from the Triangle focus area to the basins. Parking lot still exists on fill on the east side of Alcohol Road. Two MVA/Hylene buildings still exist on the far eastern side of focus area.
- The 1952 plant layout map contains similar structures as those on the 1946 aerial photograph with the addition of the 852 building along Kinetic Road. A total of 21 buildings were noted on the plant layout map.
- The 1956 aerial photograph is similar structures to the 1951 aerial photograph and 1952 plant layout map. Noted more filling in MVA/Hylene building area north towards the basin complex.
- The 1959 aerial photograph indicates more filling is occurring on the far eastern side of the focus area near the MVA buildings. Ditch running from Triangle area to Basin still exists. Larger parking lot on eastern side of Alcohol Road. Basin outline to east is near its present day configuration. Greater number of railroad tracks observed running north-south from Fluoroproducts focus area. Similar building structures observed on western side of focus area.
- The1962 aerial photograph and 1963 plant layout map contain similar structures with the addition of the isocyantes buildings and “Hylene” manufacturing building in the eastern portion of the focus area with ancillary tanks. In addition, three dinitrotoluene aboveground storage tanks (DNT ASTs) are present along the southern border of the focus area. Additional rail lines are noted south of the Miscellaneous Stores (845) building and trending north south along the north focus area boundary with the basin complex. A storage area is also noted at the far north area (north of the parking lot).
- In the 1974 aerial photograph, expansion of the Elastomer area on the east side of the focus area is observed. New structures are being built on west side of former parking lot with overhead piping. Overhead pipelines are present in central portion of the FA. Basin area continues to shrink, but new drainage swale trending east-west appears on north side of Elastomers area. Ditch still exists from basin complex to Triangle. Building 22 (Oil and Paint Shop) is gone and replaced by two ASTs.
- The 1979 aerial photograph is blurry, however it appears to show similar structures as the 1974 aerial photograph with a notable expansion of manufacturing buildings into the former parking lot.

- The 1995 aerial photograph is blurry, however it appears to show similar structures as the 1979 aerial photo with the addition of buildings in the north where there was formerly a parking lot.
- In the 2001 aerial photograph, several buildings are removed, including 845, three DNT ASTs, most of the store buildings on the western side of the focus area, and some of the Elastomer southern and far eastern area. The ditches north of the Elastomer and the one trending down the middle of the focus area are either filled in or are now conveyed by pipe.
- In the 2002 aerial photograph, no site changes were observed.

APPENDIX K

TRIANGLE FOCUS AREA
SUPPLEMENTAL INFORMATION

Triangle Focus Area: Supplemental Information

This appendix contains supplemental information about the Triangle Focus Area (FA).

The following compounds were produced in the Triangle FA.

Compound	1979 Prod. (MM lbs)	Primary Use
dimehtlyaniline (DMA)		dyes and explosives during WW I
p-nitroaniline (PNAn)		support development of “Kevalr” aramid fiber.
3,4-dichloroaniline (3,4-DCA)	8.6	“LOROX” & “KARMAX” herbicides
Ethylated-Toluidines	2.0	Photographic chemicals
Telomer B/BL	1.0	“Zepel” Products
o-Nitrotoluene	24.3	o-Toluidine
p-Nitrotoluene	14.7	2,4-Dinitotoluene, p-Toluidine
m-Nitrotoluene	1.5	Ethyl-Meta-Toluidines
m-Chloroaniline	2.2	Pharmaceuticals, Agricultural Chemicals
o-Chloroaniline		Urethane curing agents
α-Naphthylamine	5.0	Herbicides
Dinitrotoluene grains	1.0	Explosives
p-chloroaniline flaked	0.8	Dyes, Pigments, pharmaceuticals
4,4’-Oxydianiline	1.1	“Kapton” Film
p-Toluidine	2.7	Dyes
Mixed Xylidines	1.9	Antiozonant
beta-hydroxynaphthoic acid		amine sulfonic acids.
Beta Hydroxy (“Textile Products”)		co-polymer to enhance the dyeing properties of “Dacron” polyester.
DRL-6	4.8	“Dacron” fiber and Nylon
Baker Products, Red 2B Acid, Red 4B Acid, OTMSA	1.9	Dyes, Pigments
Nitrators		basic ingredients for many of the elastomers and aramids products
Nitrotoluene	45	o-Toluidine, p-Toluidine, m-Toluidine
Nitrochlorobenzene	70	Phenylenediamines, Agricultural chemicals
Nitronaphthalene	6	α-baphthylamine
Dinitrotoluene	123	m-Toluenediamine
Dinitrobenzene	25	m-Phenylene-Diamine
1-Nitro-3,4- dichlorobenzene	30	3,4-Dichloroaniline
Mono-Nitrooxylenes	2	m-Xylidene, mixed xylidenes

DMA manufacturing was discontinued in 1978.

Aerial Photograph Review

Aerial photographs are provided in Appendix D. The findings are summarized here:

- Basin present in the northeastern portion of the Triangle FA until approximately 1944.
- The Trench system was visible from the earliest photo (1940) until 1979.
- A suspected drum storage area existed southeast of the Neoprene Change House from 1951 through 1962.

- ❑ Three dark patches, of unknown nature, where present on the eastern side of the Triangle FA from 1940 through 1943.
- ❑ A visible dark patch, consistent with the description and location of Solid Waste Management Unit (SWMU) 58, is seen in the Bulk Storage area in the 1964 aerial photo. However, this post-dates the time frame during which the SWMU was reportedly active.

The earliest maps of the Triangle area pre-dated aerial photo technology. Based on building layout maps from 1917 and 1919, it can be seen that intermediate production buildings associated with the Dyestuff business concern were built and operating in the area of the Triangle Intermediates area. Further east, the warehouses, rail yard, and other sub areas were not yet built. Between 1900 and 1930, it is believed that this area was used for smokeless gunpowder associated with the Carneys Point works and bunkers and magazines were located in this region. In the 1939 building layout map, a majority of buildings in the Triangle Intermediates area, storage warehouse to the east, Neoprene production facilities in the Elastomers area, and a large drum storage area are shown.

The 1940 aerial photo – source unknown – shows that many of the intermediates production facilities were operating during this period in the intermediates area. In addition, the Neoprene area and Monovinylacetylene (MVA) B and C buildings north of Neoprene Roads are visible, as are the storehouses, warehouses, and marshalling yards. Three large trenches are visible in this photo. On the northwest and southern edges of the Triangle FA are trenches as is the large north-south trending trench that parallels Ponsol Road (herein referred to as "Ponsol Trench") on the eastern edge of the FA. The Ponsol trench discharges to a basin at the northeastern most corner of the Triangle FA. Patterns at the confluence of the Ponsol Trench and the basin indicate flow was occurring to the north. A large dark patch is visible in the area that is to become the Warehouse for Finished Products (Building 838), which is east of the Intermediate Stopres Warehouse (Building 426). This dark patch is not seen in the next clear aerial photo (1946), but is possibly present in the photos from 1942 and 1943, possibly getting smaller with time. Two smaller dark patches are also observed south of the Neoprene Change House (Building 815) adjacent to the Ponsol Trench. However, these dark patches are not observed on future aerial photos.

1940 Source U.S. Army Corps of Engineers (ACOE) - Bad photo, not reviewed.

The 1942 Source ACOE aerial photo is generally of poor quality and is not reviewed herein. However, it is apparent that Ponsol Trench continues to flow into the basin at the north eastern corner if the Triangle FA.

1943 Source ACOE – Same as the 1942 aerial photo.

1944 Source ACOE - Same as the 1942 aerial photo. However, it is apparent that the basin has moved eastward from the Triangle FA to the SWMU 8 FA.

In the 1946 source ACOE aerial photograph, filling of the marshland to the east of the Triangle FA is apparent as is the filling of the basin at the northeastern corner of the FA. The Warehouse for Finished Products (Building 838) and Ceresan Packing Shipping House (Building 613) are now visible. Smoke, possibly from burning in the western portion of SWMU 8 is also visible. Construction and Fabrication activities are increasing in the southeastern portion of the Triangle FA and encroaching on the native marsh material.

In the 1951 source ACOE aerial photograph, two new storage tanks, Ortho and Para Storage are visible in the eastern portion of the Triangle intermediates area. Other new buildings include the acetylene generator building (Building 754) and storage tank as well as C.O. Manufacturing building (Building 763). A building labeled DVA burner is located just north of the MVA B and C buildings. Buildings associated with the construction area are now present. A possible large drum storage area is visible along Ponsol Trench north of the Construction sub area and southeast of the Neoprene Change House (Building 815). The Construction and Fabrication area in the southeast corner of the Triangle FA continues to expand.

The 1956 aerial photograph – source unknown – shows that the drum storage area seen in the 1952 photograph has become larger and extends further to the south along Ponsol trench. Prior to this time period (in 1954), the Neoprene MVA B and C buildings were destroyed. New buildings for the production of isocyanates (“Hylene”) were constructed in this area and can be seen in the 1956 aerial photograph as well as a control building between the buildings and slightly north. The remainder of the aerial photograph is dark and hard to distinguish additional information. However, the Construction and Fabrication area in the southeast corner of the Triangle FA seems to be fully built out by this time.

The 1962 ACOE aerial photograph is of low quality and not useful for review. However, the drum storage area southeast of the Neoprene Change House, previously mentioned, appears to still be present.

The 1964 ACOE aerial photograph is of low quality and not useful for review. However, the drum storage area southeast of the Neoprene Change House, previously mentioned, appears to have been removed.

The 1964 aerial photograph of unknown origin is of high quality and shows extensive expansion of the Elastomers area. This includes new tanks in the area of the New Products Building (745) where “Viton”, “Adiprene”, and various rubber curing compounds were manufactured. A continuous DNT production facility is visible east of the Nitrators as are storage stands for dinitrotoluene. The Elastomers office and laboratory building is built in the northeastern corner of the Triangle FA where the old basin that received discharge from Ponsol Trench was previously located. Several additional buildings are also present in the Construction and Fabrication area. A dark patch is visible within the Bulk Storage area, which is west of the Triangle Intermediates area and east of the Engineering area. This area was addressed as part of the SWMU 58 investigation. SWMU 58 was a storage/staging area for sludges derived from the purification process of crude dichloroethane, dichloroaniline, o- and p-toluidine. The sludge was stored until enough sludge accumulated. The sludge was then loaded into narrow gauge rail cars using front-end loaders for iron recovery. The process reportedly continued from the 1930s until the late 1950s when DuPont changed the process from iron reduction to catalyst reduction. However, this is the first aerial photograph where any obvious evidence of this operation can be seen.

The 1974 aerial photograph of unknown origin is of good quality and shows continued expansion in the areas north of the Elastomers area and to the west of the New Product Building. Shops and garages in the center of the Triangle FA have been demolished and the Chambers Works Quality Control laboratory is now present. At this point the area is highly industrialized with pavement and parking lots separating the buildings. Ponsol Trench and the trench along the northwest side of the Triangle FA remain visible. Bulk storage tanks for use in the Triangle Intermediates area are clearly visible in the Bulk Storage area.

The 1974 ACOE aerial photograph is of low quality and not useful for review.

In the 1979 aerial photograph there is little change from the 1974 aerial photograph discussed above. However, this is the last photograph where the open trenches are visible, suggesting that between this time and the next aerial photograph (1995) the trenches were altered (removed, channeled, and/or covered) in some way.

The 1995 aerial photograph is of moderate quality. In this photograph it is apparent that some dismantlement of the Triangle FA has begun. The Essential Materials warehouse (426) has been removed. Several buildings associated with the Construction and fabrication activities along the eastern edge of the Triangle FA and a small building north of the Finished Products warehouse have also been removed. The Cafeteria is also gone.

The 2001 and onward aerial photographs generally show the Triangle FA as it appears today. The “Zepel” Intermediates area, nitrators, “Viton” and Elastomers offices are visible as process units. Warehouses, storehouses, machine shops, and the Quality Control Lab are also present. The majority of Bulk Storage tanks have been dismantled in the Bulk Storage area, although 3 tanks and associated piping continue to remain in the northern portion.

APPENDIX L

BASINS FOCUS AREA
SUPPLEMENTAL INFORMATION

Basins Focus Area: Supplemental Information

This appendix contains supplemental information about the Basins Focus Area (FA).

Aerial Photograph Review

Aerial photographs dating from 1940 through 2002 were reviewed for this focus area. Aerial photographs are provided in Appendix D. The findings are summarized here:

- Whopping John Creek and its path through the Chambers Works site are clearly shown on the 1940 aerial photograph.
- Basin discharge locations into the Delaware River change over time, as follows:
  - On the 1940 aerial photograph, the original drainage ditch is to the northwest (it was no longer in use at this time).
  - On the 1951 aerial photograph, flow from the basins was through the Solid Waste Management Unit (SWMU) 43 area and out the northeast drainage ditch.
  - On the 1959 aerial photograph, a pumping station and discharge pipeline are visible.
  - On the 1979 aerial photograph, the pipeline discharge location has changed (because a storm destroyed the pipe section off the jetty).
- Two outfall ditches are filled in as follows:
  - On the 1951 aerial photograph, the original drainage ditch is completely filled in.
  - On the 1962 aerial photograph, the northeast drainage ditch is filled in.
- Sediments filling in basins, and the results of dredging activities (i.e., basins are full of water), can be seen on the 1951, 1956, 1959, 1964, and 1974 aerial photographs.
- Expansion of the ditches in the southern basin area (where SWMU 55-4, SWMU 55-1, and SWMU 12 currently exist) can be seen on the 1959 and 1964 aerial photographs. Likely, this expansion was because of dredging in 1952, 1958, and 1962.
- Remediation activities for SWMUs 14, 15, 16, 5, and 43 are visible on the 1995 and 2001 aerial photographs.

APPENDIX M

SWMU 8 FOCUS AREA
SUPPLEMENTAL INFORMATION

SWMU 8 Focus Area: Supplemental Information

This appendix contains supplemental information about the Solid Waste Management Unit 8 Focus Area (SWMU 8 FA).

Historic Records Review

Landfill IV (SWMU 8) was active from the 1930s to 1974 and was used for disposal of various wastes from the operating areas of the Chambers Works complex. This waste included solid and semi-solid wastes (bulk sludge and tars, basin and river dredgings, spent carbon and catalyst, fly ash, powders, asbestos, empty containers, building rubble, and general refuse) and liquid wastes (e.g., waste oil, spent solvents). A majority of these wastes were disposed in bulk form, and a portion was disposed in drums (steel or cardboard), barrels, or other containers. Operation of Landfill IV was the responsibility of the Chambers Works Stores and Transport (S&T) Department. The S&T Department used approximately 21 narrow gauge sludge cars and 175 waste hoppers to collect process waste from all operating areas of Chambers Works for transport to Landfill IV (DuPont, 1969). In addition, the S&T Department managed activities within the area now designated as SWMU 8, including recycling of scrap metal and empty containers, incineration of liquid chemicals and solid waste, and disposal of non-process general trash. Review of the aerial photographs and other records indicate that the method used for fill emplacement was to dump the bulk waste (including barrels and other containers) near the active face of the landfill and then to bulldoze the bulk into place, spreading it out with the heavy equipment.

Landfills A and B were issued an New Jersey Department of Environmental Protection (NJDEP) Certificate of Approved Registration (#1713B) on September 15, 1975. This landfill registration described the permitted material for disposal in Landfills A and B as follows: “the elastomeric waste, oils, tars, silt, iron, hydroxide, aluminum hydroxide and iron oxide sludges. No radioactive materials, septic tank wastes, sewage sludge, or liquid or soluble chemicals may be disposed at this site.” On March 8, 1983, the certificate of registration was modified to allow the disposal of rubble, asbestos, plastic, bottom, and fly ash.

A geophysical magnetometer study was conducted in 1989 and revealed several anomalies in Landfill IV (Conoco, 1990). These anomalies represented ferro-magnetic objects that may include drums, building debris (structural iron, rebar, and roofing material), or other metallic scrap (piping, equipment, and general refuse). A range finding calculation was performed by Conoco in 1992 to estimate the maximum number of 2-foot by 3-foot (2’ x 3’) steel drums that may be present in SWMU 8, assuming all magnetic anomalies were caused solely by densely packed steel drums. This evaluation yielded an estimate of between 600,000 to 2,000,000 buried drums in SWMU 8. Over the course of several investigations, no stacked or intact drums have been encountered. A recent magnetometer study, along with soil borings advanced into areas of magnetic anomalies, have shown that magnetic anomalies in SWMU are caused by metallic building debris and other scrap metal, including drum remnants.

Available historic records indicate that approximately 178,000 containers were disposed of in Landfill IV between 1940 and 1975. Drummed waste would account for about 1% of the total fill volume in SWMU 8. Results of this evaluation, including references to supporting documentation, were submitted to NJDEP and U.S. Environmental Protection Agency (EPA) via electronic mail on February 9, 2004.

DuPont also has reviewed available research on corrosion of buried drums to determine expected longevity of drums buried in SWMU 8 (Mutch and Sutherland, 1990; Mutch and Norris, 2001). Based on this research, under site-specific conditions, expected drum life (integrity) is between seven and ten years. Considering corrosion study information, records on historic drum disposal methods at SWMU 8, and recent investigations (including soil borings and test pit excavations), it is highly unlikely that any intact drums remain within SWMU 8.

Aerial Photograph Review

A review of aerial photographs dating from 1940 through 1974 is provided here to highlight significant changes that occurred at SWMU 8. Aerial photographs are provided in Appendix D. The findings are summarized here:

- In the 1940 aerial photograph, the remains of abandoned narrow gauge railways and former smokeless powder storage buildings are visible. Also evident on this photograph are the initial filling operations associated with Landfill IV (SWMU 8) along the western edge of the SWMU 8.
- In the 1956 aerial photograph, two excavation areas within earthen berms or dikes are evident on either side of Patrol Road.
- In the 1964 aerial photograph, a new road (Neoprene Road) can be seen connecting the Chambers Works operating areas to the west with Patrol Road. Landfilling activities are evident in the diked area north of Neoprene Road. The surface-water from Whopping John Creek is still visible flowing through an open ditch in the area.
- The 1972 aerial photograph is also known as the “Red Spot” Color Aerial Photograph. In this photograph (received from the NJDEP in May 2005), a red area is visible about 150 feet southeast of the M12 well cluster and 300 feet northeast of the L121 cluster. The cause of the red color visible on the 1972 color photograph is not known.
- In the 1974 aerial photograph, no surface water is evident in the diked area north of Neoprene Road. Most of Landfill B is covered by surface water except for the northwest corner, and most of Landfill A had been filled in except for a central ditch section. The construction of concrete pipe sections is visible along the southern edge of Landfill A.

The following aerial photographic review, submitted as part of the NJDEP Technical Requirements for remedial investigations, provides a brief history of the SWMU 8 area, and was presented in the *SWMU 8 RI Report* (February 2005). The aerial photographs have been previously submitted in hard copy, and are available on request in a digitally orthorectified format suitable for viewing with a geographic information system (GIS) software platform.

Before DuPont activities, the SWMU 8 area consisted of wetlands adjacent to Whopping John Creek. Between 1900 and 1930, the SWMU 8 area was used for smokeless gunpowder storage associated with the Carneys Point Works. In the 1940 aerial photograph, the remains of abandoned narrow gauge railways and former smokeless powder storage building locations are evident. Also evident in the 1940 photograph were the initial filling operations associated with Landfill IV (SWMU 8) along the western edge of the SWMU 8 area.

In the1956 aerial photograph, the area of Landfill IV expanded to replace a majority of the Whopping John Creek marsh along the western portion of the area. Surface-water drainage from Whopping John Creek was diverted into a ditch that traverses the area, and a new road (Patrol Road) was constructed on an elevated dike. Two excavation areas within earthen berms or dikes were evident on either side of Patrol Road.

In the 1964 aerial photograph, a new road (Neoprene Road) was constructed connecting the Chambers Works operating areas to the west with Patrol Road. Three diked areas were constructed. The diked area east of Patrol Road is the footprint of Landfill B (SWMU 30). The water-filled diked area south of Neoprene Road and west of Patrol Road is the footprint of Landfill A (SWMU 30). Landfilling activities can be observed in the diked area north of Neoprene Road. The surface-water flow from Whopping John Creek is still observed flowing through an open ditch in the area.

In May 2005, NJDEP asked DuPont to have full coverage of the B Aquifer in the former “Red Spot Area” as shown on the 1972 color photograph. The “Red Area” is approximately 150 feet southeast of the M12 well cluster and 300 feet northeast of the L12 well cluster. The cause of the red color visible on the 1972 color photograph is not known.

In the 1974 aerial photograph, the diked area north of Neoprene Road was filled in and no surface water is evident. Most of Landfill B was covered by surface water except for the northwest corner. Most of the Landfill A area had been filled in except for a central ditch section. Surface-water flow in most of the area has been diverted into buried concrete pipes. Construction of concrete pipe sections is visible along the southern edge of Landfill A. Two parallel pipelines were constructed, one interior and one exterior. The interior pipeline consisted of round concrete sections used to convey overflow from the active disposal areas within Landfills A and B as part of the Process Water Ditch System (SWMU 17). The exterior pipeline consisted of rectangular concrete sections used to convey surface water from Whopping John creek and surface-water ditches to the south as part of B Ditch (SWMU 56A).

Currently, two permitted landfills (A and B), several paved parking lots and roads, and various operating areas of the Chambers Works complex now overlie SWMU 8.

APPENDIX N

WASTEWATER TREATMENT PLANT FOCUS AREA SUPPLEMENTAL INFORMATION

Wastewater Treatment Plant Focus Area: Supplemental Information

This appendix contains supplemental information about the Wastewater Treatment Plant Focus Area (WWTP FA).

Aerial Photograph Review

Aerial photographs dating from 1940 through 2002, and plant layout maps from 1919 through 1963, were reviewed for this focus area. Aerial photographs are provided in Appendix D. The findings are summarized here:

- In the 1919 layout map, the Carneys Point Works Plant 3 is visible in the western end of the area, including a power plant house, office building, and manufacturing operations. A portion of the Carneys Point Plant 2 is visible at the eastern end of the area. Storage bunkers connected by narrow-gauge railways occupy the northern half of the area.
- In the 1939 layout map, structures labeled "Sodium Bulk Storage" are visible in the southwestern corner of the WWTP FA. A few buildings previously identified on the 1919 map are now labeled "old foundation."
- In the 1940 aerial photograph, most structures associated with the Carneys Point Works Plants 2 and 3 are gone, but some foundations, former roads, and narrow-gauge railways remain. In general, the areas associated with Plants 2 and 3 appear to be covered with vegetation and, presumably, inactive. Six storage bunkers in the northern portion of the area associated with Carneys Point appear intact. The southwest corner appears to be part of the Chambers Works wastewater basin.
- The 1942 and 1943 aerial photographs were blurry and difficult to interpret. The 1944 aerial photograph also was blurry, but looks similar to the 1940 photograph.
- The 1945 building map shows only one building (745)—the Sodium Tank Farm.
- The 1946 aerial photograph looks similar to the 1944 photograph except that a storage area with a building can be seen east of the Sodium Tank Farm, and might be the start of the Equipment Storage Area (where miscellaneous site equipment was stored until it was reused on-site or disposed).
- The 1951 aerial photograph only shows the western portion of the WWTP FA. Overall, the 1951 photograph looks similar to the 1946 photograph except for the following:
    - Two aboveground storage tanks (ASTs) can be seen just northwest of the Sodium Tank Farm. Based on historical information, these ASTs were called Building 1012 and contained oil and petroleum products. A berm is visible around the tanks.
    - Two ASTs can be seen in the southwestern corner of the FA and appear to be associated with the basins. Based on historical information, these ASTs were called Building 1007 and contained benzene and methyl alcohol.

- ❑ The 1952 building map is similar to the 1951 aerial photograph, except that an additional building (668) can be seen east of the Sodium Tank Farm associated with the Salvage Yard. No information is available for Building 668.
- ❑ The 1956 aerial photograph is similar to the 1952 building map. The Basin FA can be seen in the southwest corner of the focus area, and the equipment storage area appears to be larger. The tanks associated with the Sodium Tank Farm are not visible; the only feature of the Sodium Tank Farm still visible is the northernmost building. Also, a new structure has been constructed on top of the old foundations that were labeled on the 1919 layout map as “Power Plant.” This new structure is the current Sandblast Building. The southern part of the area (Rail Yard area) contains a dredge spoils disposal area associated with Solid Waste Management Unit (SWMU 8). This area received dredged material removed from the wastewater basins located to the west.
- ❑ The 1959 aerial photograph is similar to the 1956 photograph, except that the layout of the basins in the southwest corner has changed. One basin is visible with a drainage ditch running to the Basins FA.
- ❑ The 1962 aerial photograph is blurry, but looks similar to the 1959 photograph.
- ❑ The 1963 layout map identifies the Sandblast Building and sand storage structure, both of which were constructed before 1956 on top of the powerhouse foundations from the Carneys Point Plant 3.
- ❑ The 1964 aerial photograph looks similar to the 1959 photograph except that only two bunkers remain in the eastern portion of the FA.
- ❑ The 1974 aerial photograph shows the following significant differences in the building layout:
  - The WWTP is visible and vast areas are paved or contain gravel.
  - A rail system is visible along the southern perimeter of the FA; previously, this area was part of SWMU 8 and was vegetated.
  - The basins in the southwest corner have been replaced by gravel or pavement. A trench is visible and appears to empty into the Basins FA.
  - Building 1007 (oil and petroleum ASTs) is no longer visible.
  - The berm around Building 1012 (benzene and methyl alcohol ASTs) is no longer visible.
  - The Equipment Storage Area is now larger and is bordered by the rail area.
  - SWMU 8 no longer crosses into the WWTP FA.
- ❑ The 1977 building map does not correlate with the 1974 and 1979 aerial photographs, so its accuracy is suspect.
- ❑ The 1979 aerial photograph shows only a small part of the western portion of the FA; generally, the layout looks similar to the 1974 aerial photograph.
- ❑ The 1990 building map shows only the equipment storage area building, but the map does not appear to be accurate based on the 1974 and the 1995 aerial photographs.

- ❑ The 1995 aerial photograph is similar to the 1974 aerial photograph except for the following:
  - The WWTP features are more complex, with the WWTP occupying most of the FA.
  - Building 1012 (benzene and methyl alcohol ASTs) is not present; the area appears to have been paved.
  - The equipment storage area has fewer pieces of equipment than are shown in older photographs.
  - A trench remains along the western perimeter.
- ❑ The 2001 aerial photograph is similar to the 1995 photograph except for the following:
  - The trench that ran along the western perimeter is no longer visible.
  - The majority of the western area along the perimeter appears to have been paved.
  - The equipment storage area is not visible.
- ❑ The 2002 aerial photograph is similar to the 2001 photograph.

APPENDIX O

COGENERATION FOCUS AREA SUPPLEMENTAL INFORMATION

Cogeneration Focus Area: Supplemental Information

This appendix contains supplemental information about the Cogeneration Focus Area (FA).

Aerial Photograph Review

Aerial photographs dating from 1940 through 2002 were reviewed for this focus area. Aerial photographs are provided in Appendix D. The findings are summarized here:

- The former Power Plant 2 is visible in the photographs from 1940 through 1974.
- Concrete foundations are visible from 1940 through 1964.
- An area under construction in the northwest portion of the focus area (possible location of the Explosives Hazards Laboratory) is shown in maps dated 1962, 1964, and 1974.
- Railroad tracks running along the southern to northeastern portion of the focus area are visible on photographs from 1964 to 2002.
- The Cogeneration Facility and the Explosives Hazards Laboratory first appear on the 1995 map and are evident in maps for 2001 and 2002 also.
- Henby Creek clearly is visible in all of the photographs.

APPENDIX P

PRAXAIR FOCUS AREA SUPPLEMENTAL INFORMATION

Praxair Focus Area: Supplemental Information

This appendix contains supplemental information about the Praxair Focus Area (FA).

Aerial Photograph Review

For the Praxair FA, plant layout maps from 1919 and 1939 were reviewed along with aerial photographs dating from 1940 through 2002. Aerial photographs are provided in Appendix D. The findings are summarized here:

- The 1919 plant layout map indicates that the Plant 2 entrance was to the north of the Praxair FA. Northwest of the focus area, an entrance can be seen to Carneys Point storage and drying magazines and to Plant 2. This entrance is referred to as the dirt access road.
- No buildings can be seen on the 1939 plant layout map because it included only the Dyes FA and not the Carneys Point Plant.
- No structures can be seen on the 1940 aerial photograph. Trees and one dirt access road are visible from the west. This access road bisects the area parallel to Shell Road.
- No structures are visible on the 1944 and 1946 aerial photographs. A new engineered road can be seen parallel to Shell Road and bisects the area from northeast to southwest. The dirt access road to the west of the engineered road is still visible. Railroad tracks can be seen parallel to Shell Road and east of the engineered road.
- The 1956 aerial photograph shows a layout similar to the 1946 aerial photograph. Development of the Landfill B access road is visible west of the FA. The old dirt access road can be seen disappearing beneath trees and overgrowth.
- In the 1964 aerial photograph, trees and bushes to the east and west of the engineered road are being maintained around the road and railroad. A small area of standing water can be seen in the western portion of FA, and a pipeline with booster station buildings can be seen along Patrol Road.
- The 1974 aerial photograph shows structures similar to those in the 1964 photograph. A new gate/fence can be seen in the southeastern portion of the FA, and a new short dirt access road can be seen connecting the Landfill B access road to the engineered road.
- In the 1995 aerial photograph, the Union Carbide/Praxair facility is visible. Buildings associated with the pipeline and the railroad along Shell Road can be seen.
- The 2001 and 2002 aerial photographs show the same structures as the 1995 aerial photograph. An additional access dirt road and turnaround just west of railroad line is visible.

APPENDIX Q

CURRENT OFF-SITE PROPERTIES FOCUS AREA SUPPLEMENTAL INFORMATION

Current Off-Site Properties Focus Area: Supplemental Information

This appendix contains supplemental information about the Off-Site Focus Area (FA).

Aerial Photograph Review

Plant layout maps from 1919 along with aerial photographs dating from 1940 through 2002 were reviewed for the Off-Site FA. Any significant findings are summarized in the History section.

APPENDIX R

PHARMACEUTICALS FOCUS AREA
SUPPLEMENTAL INFORMATION

Pharmaceutical Focus Area: Supplemental Information

This appendix contains supplemental information about the Pharmaceuticals Focus Area (FA).

Aerial Photograph Review

For the Pharmaceuticals FA, plant layout maps from 1919, 1939, 1945, 1952, and 1963 were reviewed along with aerial photographs dating from 1940 through 2002. Aerial photographs are provided in Appendix D. The findings are summarized here:

- The 1919 plant layout maps show this area as a "Shipping Area" associated with the Carneys Point Works to the north. Narrow gauge rail lines cross the area connecting 11 structures. Salem Canal Road is evident along the southern edge of the area adjacent to the canal.
- In the 1940 aerial photograph, the area is an empty lot with no identifiable features other than Salem Canal Road. There is little evidence of the structures and rail lines shown on the 1919 map.
- In the 1943 aerial photographs, three parking lots, the Caer Building, and the Canal gatehouse are visible, as well as a site perimeter fence. No other new features were evident in the photographs and layout maps from 1943 to 1964.
- In the 1974 aerial photograph, interceptor well INT-106 (L04-R01CD) is visible in the south-central portion of the area. No other changes can be seen in the area until 1995.
- In the 1995 aerial photograph, the pharmaceutical Research and Development (R&D) facility has been constructed.
- In the 2001 aerial photograph, a few additional structures are visible. The pilot plant was expanded in 1999 with an additional building (M-7).
- In the 2002 aerial photograph, no site changes are evident.

APPENDIX S

MISCELLANEOUS FOCUS AREA SUPPLEMENTAL INFORMATION

Miscellaneous Focus Area: Supplemental Information

This appendix contains supplemental information about the Miscellaneous Focus Area (FA).

Aerial Photograph Review

Aerial photographs dating from 1940 through 2002 were reviewed for this focus area. Aerial photographs are provided in Appendix D. The findings are summarized here:

- On the 1940 aerial photograph, this FA consists mainly of undeveloped land.
- On the 1944 aerial photograph, buildings and roads associated with the work under the Manhattan Project are visible.
- On the 1951 aerial photograph, many buildings were dismantled.
- On the 1956 aerial photograph, a large warehouse building is evident to the south.
- On the 2001 aerial photograph, only four buildings remain in this FA.
- On the 2002 aerial photograph, Building 886 has been dismantled.

APPENDIX T

CARNEYS POINT FOCUS AREA
SUPPLEMENTAL INFORMATION

Carneys Point Focus Area: Supplemental Information

This appendix contains supplemental information about the Carneys Point Focus Area (FA).

Carneys Point History

In 1889, the Ordnance Department of the U.S. Army requested DuPont to send a representative to Europe to find out how to make smokeless gunpowder (nitrocellulose). However, since the U.S. could not find or learn how to make smokeless gunpowder, DuPont started to experiment with nitrocellulose at the Brandywine Plant. The danger inherent with working with two explosives materials in close proximity to each other caused DuPont to consider other locations for nitrocellulose experiments. Carneys Point was selected for the following reasons:

- Reasonable proximity to the DuPont Wilmington, Delaware, headquarters
- Adequate supply of freshwater for processes and other water for cooling and general utilitarian uses
- Water-borne and rail transportation facilities for raw material, including acid (made at Repauno Works), and for final product shipment
- Availability of dependable labor
- Sufficient land and remoteness from urban centers to protect neighboring properties and people from harm in the event of a major explosion or fire

The Thomas Carney farm was purchased from the Norton family on July 19, 1891. A considerable portion of the ground was marshland. The site, which was composed of approximately 198 acres of wetlands, was an ideal site for explosives manufacturing because the marshes provided natural firebreaks.

The Carney farmhouse remained and crops were harvested during the initial plant construction. Initial construction consisted of seven buildings, including a boiler (power) house, office, laboratory, magazine, dock, and rail service from cart roads. The plant began operation by 1892. Building 1 was built on the western side of the railroad, and Buildings 2, 3, and 4 were built on the eastern side of the railroad. Buildings 1, 2, and 3 were nitrocellulose production lines: Building 1 for cotton preparation, Building 2 for nitrating, and Building 3 for pulping and washing. Building 4 was a press house for forming nitrocellulose into blocks for use in torpedoes. Buildings 2, 3, and 4 were demolished prior to 1929.

The first nitrocellulose was produced in 1892. By the end of that year, 100,000 pounds were delivered to the U.S. Navy. The same year, Pierre Samuel DuPont began experiments to convert nitrocellulose into smokeless powder. His efforts were successful when the first shotgun powder was packed approximately one year after nitrocellulose was produced. The first shotgun powder was altered sufficiently within the next year to meet government specifications for rifle powder. The first government contract for military rifle powder was received late in 1894. Although existing specifications were met, the still process was not considered the proper procedure for manufacturing. Due to unsuccessful experimentation, DuPont bought Maxim patents in 1896 and transferred operation to Carneys Point. One of the most important features of the new procedure was that one or more pins could be placed in the extrusion die, so that the extruded cord had one or more holes in it. These holes could control the burning rate of powder so that it could be used in different caliber of rifles.

A new powder line was built for the Maxim process in 1896 almost parallel to the original line of buildings (1, 2, 3, and 4), but about 100 yards to the east. Most of the Maxim process line buildings were torn down prior to 1930 when the Burnside laboratory was built and other buildings were moved to new locations at the plant. Storage and shipping areas were noted to be on the "mainland" beyond the point. All of the major manufacturing areas and support functions were conducted on the narrow peninsula of land projecting northward, surrounded on one side by the Delaware River and on the other by Bouttown Creek and marsh.

During WWI, the Carneys Powder Works had hundreds of manufacturing, storage, and service buildings scattered between Carneys Point and the Deepwater Canal (Salem Canal). Between 1902 and 1910, several new powder lines were moved to Carneys Point from original locations. Between 1906 and 1912, the Carneys Point Plant was almost completely re-built. Brick buildings were constructed for nitration, mixing, cutting, solvent recovery, and drying. Beginning in October 1914, DuPont supplied gunpowder to the Allied troops. To meet demand, DuPont expanded smokeless powder production by constructing new plants and tripling production capacity. The existing plant (Plant 1) was considered the "A" line, and two more lines ("B" and "C") were constructed. Production lines "B" (Plant 2) and "C" (Plant 3) were in full operation by the beginning of 1915. The production capacities of Plants 1, 2, and 3 were approximately 100 million pounds of smokeless powder per year. The largest amount of powder packed out in a single day was within 10 pounds of a million pounds. Normal daily output of the three plants exceeded two thirds of a million pounds per day for extended periods during WWI.

- Plant 2 was located on the western side of Pennsville Road just below the gate to Plant 1 and extended about halfway from "Shell" Road to the river. Plant 2 was built and ready for production just before July 1915.
- Plant 3 construction began shortly before Plant 2 was finished and was located between Plant 2 and the Delaware River. The Plant 3 gate was further to the south near the road curve above Deepwater. The railroad tracks from Plant 3 to Deepwater Point pier were constructed in the winter of 1915-1916, primarily for ocean-going shipment of gunpowder and explosives. Plant 4 was constructed at the same as Plant 3.
- Plant 4 was established by the Explosive Department of DuPont for the manufacture of picric acid by nitration of phenol and production of dimethylaniline (DMA) for conversion to tetryl. This plant became known as the "High Explosive Plant." The plant was built in the Deepwater Point area, and the first picric acid was produced in 1915. Plant 4 later became known as the Kinetic, Freon®, or Fluoroproducts areas.

In 1914, DuPont began construction of Carneys Point village, which ultimately had several hundred bungalows, two-story houses, and row upon row of dormitories and apartment buildings. DuPont erected some 2,200 buildings, including housing units and various service facilities, during WWI. After the Armistice, the barracks and apartment buildings were razed and many of the bungalows were sold to private bidders and moved. In 1948, DuPont disposed of the 603 company dwelling properties at Carneys Point Village and conveyed other holdings such as schools, fire house, parks, and street water and electric services to the community and public utility firms.

Two sheet metal clad still houses near the riverfront were installed in 1915 and served as facilities for the extraction of benzene, toluene, naphtha, and other hydrocarbon fractionations from coal-tar. In 1916, a cracking plant was constructed. Picric acid manufacturing was augmented in 1917 by a supplementary process and equipment to make ammonium picrate, which was used in American military explosives. In 1915, the Saltpeter Plant was built near the waterfront about midway between the Explosive Plant and Salem Canal mouth. This plant was used to refine crude nitrate by removing impurities and providing high quality sodium nitrate to the powder plants.

In 1919, due to the Armistice, military orders for explosives were canceled and the Powder Works slowly contracted as the Dye Works expanded. Plant 1 operated continuously from WWI into WWII until 1977, making nitrocellulose and smokeless gunpowder. An increase in production was noted for the WWII years from 1938 to 1945. Some off-shots of the nitrocellulose production included nitrate film (celluloid), carboxy methyl cellulose (CMC), lacquer, cellulose acetate, and rayon.

The smokeless powder area mix house explosion that occurred in the spring of 1978 hastened the downturn of the Carneys Point Plant 1. Smokeless powder production stopped immediately. Overall, production on the rest of the site probably stopped in 1978. Decommissioning of Plant 1 was underway in 1978 and was completed in or about 1979.

Chemical Processes

Operating procedures were crude in the late 1890s to early 1900s and are summarized below.

1. The raw cotton was received as sewing-factory off-specification product.
2. The cotton was dipped into small earthenware vessels containing only a couple of quarts of acid (Building 2). The cotton was allowed to stand in the acid overnight.
3. Liquid acid was poured off and the nitrocellulose was placed on the metal ledge of the acid recovery tank. The excess acid was allowed to drain off with additional pressure from fork or paddles.
4. The nitrocellulose was immersed in water and removed to Building 3.

The first smokeless powder was made in a still using the following procedures:

1. Finely pulverized nitrocellulose was made into a water slurry in the still.
2. Solvent was sprayed into the slurry while the slurry was agitated.
3. Each drop of solvent dissolved a small amount of nitrocellulose.
4. The water precipitated the nitrocellulose, producing a powder grain.
5. The excess solvent was boiled off.

6. The powder grains were removed and dried.

This process was used to produce DuPont shotgun powder for approximately 70 years after it was first developed. Operating details changed over the years, but the basic procedure remained the same into the 1960s when the operation was closed down.

The general granulation procedures were as follows:

1. Nitrocellulose was reduced to a colloid by kneading it with a solvent (usually ethyl ether and ethyl alcohol).
2. Colloided nitrocellulose was extruded through a die to form a cord or rope.
3. The cord was cut into short lengths to produce powder grains.

One of the other smokeless gunpowder manufacturing developments of the late 1890s was the introduction of a mixture of ether and alcohol as the solvent for nitrocellulose production and the accompanying use of dehydration processes. The use of ether/alcohol as a solvent enabled the removal of dry nitrocellulose from the procedure (dry nitrocellulose is extremely dangerous). The dehydration procedure which was developed in the late 1890s was as follows:

1. Water-wet nitrocellulose was formed into a cake in a press.
2. Alcohol was pumped through cake to wash out water.
3. Nitrocellulose cake with alcohol was placed into a mixer and ether was added, which colloided the nitrocellulose to form a plastic mass.
4. The plastic mass was extruded through a die.

In the early years of the dehydration process, all of the alcohol and ether used was subsequently lost as the powder was dried. A solvent recovery operation was devised in the early 1900s. The solvent recovery procedures included the following activities:

1. Powder was cut into grains as it was loaded into a container.
2. Heated air was blown into the grains.
3. Air that evaporated the solvents was passed through a condenser, which liquefied the ether and alcohol for recovery and reuse.

The following two technical innovations for smokeless gunpowder manufacturing were introduced around 1908:

- Diphenylamine was added as a stabilizing agent.
- Dinitrotoluene was used as a coating on rifle powder to control ballistics and allowed for entire runs of powder to be blended and packed.

Persistent efforts were made to improve nitration operations prior to WWI. Mechanical improvements in cotton handling, acid preparation, and nitration procedures were developed. In 1912 to 1913, the mechanical dipper process was perfected. This process includes the procedures listed below, which were used for approximately 50 years. In the 1960s, the process was displaced by a continuous nitration system.

1. Acid was placed in a dipping pot equipped with agitators.

2. Cotton was dumped into the acid and quickly submerged.
3. The mixture was agitated for several minutes while the cotton was nitrated to nitrocellulose.
4. The contents from the dipping pot were dropped into a wringing device immediately below the pot.
5. The high-speed wringing device was removed and most of the acid was recovered.
6. Nitrocellulose was forked into a drowning tube below and covered with water.

Prior to WWI, drying was performed by heating the powder in buildings known as the air dry houses. The method was effective, but slow (up to eight months of drying were required for some types of powder). To increase production rates in response to war-time demand, processing improvements involving water-drying were implemented. The introduction of water-drying necessitated another step into the production process for smokeless gunpowder:

- Powder was water-wet at end of solvent removal.
- Powder was loaded into cars and passed through an elongated building known as a tunnel.
- Steam or hot air was blown through the tunnel countercurrent to the movement of the powder until the excess water was removed.
- The powder proceeded to the finishing process.

Picric acid was first processed using a standard chemical method where phenol was nitrated. During WWI, phenol became scarce so DuPont developed a new method that included the following:

- Chlorination of benzene to chlorobenzene
- Nitration of chlorobenzene to dinitrochlorobenzene
- Hydrolyzing to dinitrophenol
- Final nitration to picric acid

DuPont also made dimethylaniline (DMA) as a detonating agent by using aniline or aniline hydrochloride from the Repauno Works.

One of the by-products of the nitrate refinement was potassium nitrate, which was used in shrapnel shells.

Aerial Photograph Review

Most of the plant layout maps for the Carneys Point Plant were destroyed around the time the plant was closed (1977 or 1978). The plant layout maps that were available for review included the 1919 map and the 1977 map. The 1977 plant layout map indicates the buildings by financial assets management number but not by name. As part of the retiree interview process, names of buildings were added to the 1977 plant layout map. The 1977 plant layout map closely matches the 1940s-to-present aerial photographs, which verifies the current understanding that the chemical processes did not change from WWII to the time when the plant was closed.

The only areas of interest noted during the plant layout map and aerial photograph review were as follows:

- A white discharge from the nitrocellulose manufacturing area is visible along the western bank of Bouttown Creek and the Bouttown Tidal Flat. The western bank was reportedly dredged and spoils placed into what is now Solid Waste Management Unit (SWMU) 47.
- Acid release fume ponds (northern Carneys Point) can be seen.

Plant layout maps from 1919 and 1939 were reviewed along with aerial photographs dating from 1940 through 2002 for the Carneys Point FA. Aerial photographs are provided in Appendix D. A summary of significant findings is provided below. Limited plant layout maps exist for the Carneys Point Works; therefore, most of the discussion for Carneys Point focuses on the old plant maps and recent aerial photographs.

- In the 1894 oblique photograph of Carneys Point Plant 1, narrow gauge rail lines and small brick structures for making nitrocellulose can be seen.
- In the 1919 plant layout map, Plant 1 was located at Carney Point on the Delaware River. A large number of solvent recovery tanks can be seen in a radial pattern around the plant. Many storage and dry houses are noted throughout the marsh area. The Plant 2 entrance is located north of Henby Creek along Shell Road. Some solvent recovery structures are parallel to Shell Road and radial toward Plant 3. Plant 3 is located about midway between Plant 2 and the Delaware River.
- In the 1915 side view photograph of Plant 2 (looking west from Shell Road), one-story brick buildings used to make nitrocellulose during WWI can be seen.
- In the 1927 oblique view photograph of the ethyl alcohol plant, the plant can be seen in an area partially occupied by Plant 4. The photograph also shows large white tanks used for molasses storage.
- In the 1927 oblique view photograph of the Carneys Point Plant, the location of the power house (with stack) and typical spacing of buildings can be seen. A typical magazine dry house is located on the southeastern portion of the photograph. A water tower and wharfs are also present. Debris filling at SWMU 52 can also be seen.
- In the 1939 plant layout map, no buildings can be seen.
- The 1940 aerial photograph shows similar structures as noted on 1977 plant layout map. Although Plants 2 and 3 cannot be seen, magazines and dry houses can be seen throughout the marsh area near former plant locations. The former nitrocellulose disposal area (SWMU 19) can be seen filled with water, and large solvent recovery structures can be seen to the southeast of Plant 1. Man-made drainage ditches can be seen to the north along with access roads or a narrow gauge railroad. A white discharge can be seen on the western side of

Bouttown Creek coming from Plant 1. The Helms Cove sandbar is large at the discharge location east from Bouttown Tidal Flat.

- The 1956 aerial photograph has a similar layout to the 1940 photograph, especially in the Plant 1 area. New building structures (CSC) can be seen on the western side of Bowzer Boulevard. A large storage/shipping building can be seen near Shell Road in a former solvent recovery area from Plant 2. The channel of Bouttown Creek is reduced compared to the 1940 photograph, and a second drainage can be seen on the west bank of Bouttown Creek near Plant 1. Additional roads can be seen in the area of SWMU 19, and SWMU 19 is dry.
- In the 1964 aerial photograph, the beginnings (some berms) of the dredged spoils area can be seen. This photograph marks the first observance of the acid fume ponds in northeast corner of point and the first observance of round tanks along Bowzer Road (SWMU45-7). New buildings located over the footprints of previous buildings (1956 photograph) can be seen, and some access roads disappear (1956 photograph). Additional parking areas can be seen.
- The 1977 Plant 1 building layout map shows all buildings prior to demolition. No names are noted on buildings, only tax tracking numbers. The names of buildings were added to the geographical information system (GIS) based on this map and interviews with retirees/former worker. Some minor pipes can also be seen in this photograph.
- In the 2002 aerial photograph, the proposed D Cell Landfill overlies most of the previous Plant 1 former structures. Some foundations are visible along the eastern side of Bowzer Road. A dredged spoil area is visible, and it overlies a former storage area. The C Landfill is present to the mid-portion of the former Carneys Point combined shops location.
